our bestselling ib diploma course book for economics has been revised and updated in line with the 2011 syllabus change now in colour with increased diagrams and photographs to support students learning as well as a cd rom that contains 17 handy revision sheets specimen papers glossary and weblinks for further research

the first edition of applied health economics did an expert job of showing how the availability of large scale data sets and the rapid advancement of advanced econometric techniques can help health economists and health professionals make sense of information better than ever before this second edition has been revised and updated throughout and includes a new chapter on the description and modelling of individual health care costs thus broadening the book s readership to those working on risk adjustment and health technology appraisal the text also fully reflects the very latest advances in the health economics field and the key journal literature large scale survey datasets in particular complex survey designs such as panel data provide a rich source of information for health economists they offer the scope to control for individual heterogeneity and to model

the dynamics of individual behaviour however the measures of outcome used in health economics are often qualitative or categorical these create special problems for estimating econometric models the dramatic growth in computing power over recent years has been accompanied by the development of methods that help to solve these problems the purpose of this book is to provide a practical guide to the skills required to put these techniques into practice practical applications of the methods are illustrated using data on health from the british health and lifestyle survey hals the british household panel survey bhps the european community household panel echp the us medical expenditure panel survey meps and survey of health ageing and retirement in europe share there is a strong emphasis on applied work illustrating the use of relevant computer software with code provided for stata familiarity with the basic syntax and structure of stata is assumed the stata code and extracts from the statistical output are embedded directly in the main text and explained at regular intervals the book is built around empirical case studies rather than general theory and the emphasis is on learning by example it presents a detailed dissection of methods and results of some recent research papers written by the authors and their colleagues relevant methods are presented alongside the stata code that can be used to implement them and the empirical results are discussed at each stage this text brings together the theory and application of health economics and econometrics and will be a valuable reference for applied economists and students of health economics and applied econometrics

this textbook provides a one semester introduction to mathematical economics for first year graduate and senior undergraduate students intended to fill the gap between typical liberal arts curriculum and the rigorous mathematical modeling of graduate study in economics this text provides a concise introduction to the mathematics needed for core microeconomics macroeconomics and econometrics courses chapters 1 through 5 builds students skills in formal proof axiomatic treatment of linear algebra and elementary vector differentiation chapters 6 and 7 present the basic tools needed for microeconomic analysis chapter 8 provides a quick introduction to or review of probability theory chapter 9 introduces dynamic modeling applicable in advanced macroeconomics courses the materials assume prerequisites in undergraduate calculus and linear algebra each chapter includes in text exercises and a solutions manual making this text ideal for self study

the second edition of regional economics provides a comprehensive and up to date treatment of regional economics this fully revised edition includes key theoretical developments of the last ten years topics included span from the earliest location theories to the most recent regional growth theories it is also enriched by the recent debate on smart specialization strategies recently developed by the eu for the design of new cohesion policies key elements covered in the new edition include proximity and innovation theories the concept of territorial capital the debate on the role of agglomeration economies in urban growth this textbook is for undergraduate students in regional and urban economics as well as spatial planning courses

understanding why so many people across the world are so poor is one of the central intellectual challenges of our time this book provides the tools and data that will enable students researchers and professionals to address that issue empirical development economics has been designed as a hands on teaching tool to investigate the causes of poverty the book begins by introducing the quantitative approach to development economics each section uses data to illustrate key policy issues part one focuses on the basics of understanding the role of education technology and institutions in determining why incomes differ so much across individuals and countries in part two the focus is on techniques to address a number of topics in development including how firms invest how households decide how much to spend on their children s education whether microcredit helps the poor whether food aid works who gets private schooling and whether property rights enhance investment a distinctive feature of the book is its presentation of a range of approaches to studying development questions development economics has undergone a major change in focus over the last decade with the rise of experimental methods to address development issues this book shows how these methods relate to more traditional ones please visit the book s website at [empiricalde.com](http://empiricalde.com) for online supplements including stata files and solutions to the exercises

includes index

political economy and the new capitalism examines the relevance of sam aaronovitch s pioneering empirical studies of british

capitalism in the light of modern developments a wide range of problems are reviewed from industrial concentration today to the co ordination of economic policies in europe aaronovitch s work on the role of finance in the british economy is the subject sustained reflection individual chapters examine orthodox and left wing criticisms of finance exchange rate instability and employment growth and regions in the context of european union this work concludes with a bibliography of the published writings of sam aaronovitch and collects the reflections of some of the most distinguished thinkers in economics today including meghnad desai g c harcourt pat devine egon matzner malcolm sawyer sir alan budd jan toporowski philip arestis eleni paliginis victoria chick and ben fine

the diligent seeker of truth about our current discontents should turn to the rediscovery of classical economics by david simpson its ostensible object is to resurrect what he calls the classical tradition emanating from adam smith and distinguish it not only from keynesian economics but also from today s mainstream known to aficionados as the neoclassical orthodoxy without going into academic details this orthodoxy stands accused of replacing a theory of relative prices how many loaves will buy a pullover with a more sophisticated account of economic growth and of foisting on us a theory of rational expectations that are anything but rational samuel brittan financial times this book puts human beings back at the heart of the economic process it shows how this classical human centred tradition stretching from adam smith onward gives us a much better understanding of economic events and what to do about them than the mechanistic mathematical models of too many economists and planners today eamonn butler the adam smith institute uk david simpson writes about key economic issues with admirable lucidity he draws deeply on experience as well as on his knowledge of economic theory asa briggs david simpson skilfully argues that a market economy can be best understood as a human complex system a perspective that represents a continuation of the classical tradition in economic thought in the classical tradition growth rather than allocative efficiency is the principal object of enquiry economic phenomena are recognised to be elements of processes rather than structures and change is evolutionary the book shows the common principles that connect the early classical school the austrian school and complexity theory in a single line of thought it goes on to show how these principles can be applied to explain the characteristic features of a market economy namely incessant change growth the business cycle and the market

process itself and argues that static equilibrium theory whether neoclassical or neo keynesian cannot satisfactorily account for these phenomena this fascinating book will provide a stimulating read for academics postgraduate students and all those with an interest in economic theory and economic policy
