provocative and richly textured schwartz s analyses of the inadequacies of contemporary scientific views of human nature are compelling but the consequences are even more worthy of note los angeles times out of the investigations and speculations of contemporary science a challenging view of human behavior and society has emerged and gained strength it is a view that equates human nature utterly and unalterably with the pursuit of self interest influenced by this view people increasingly appeal to natural imperatives instead of moral ones to explain and justify their actions and those of others

looks at the major schools of psychology and considers the claims or assumptions being made about human nature and their position on the associated issues of consciousness the self the body other people and the physical world

recent empirical and philosophical research into the evolutionary history of homo sapiens the origins of the mind brain and the development of human culture has sparked heated debates about what it means to be human and how knowledge about humans from the sciences and humanities should be understood conversations on human nature featuring 20 interviews with leading scholars in biology psychology anthropology philosophy and theology brings these debates to life for teachers students and general readers the book outlines the basic scientific philosophical and theological issues involved in understanding human nature organizes material from the various disciplines under four broad headings 1 evolution brains and human nature 2 biocultural human nature 3 persons minds and human nature 4 religion theology and human nature concludes with fuentes and visala s discussion of what researchers into human nature agree on what they disagree on and what we need to learn to resolve those differences

each chapter observes the nature of human beings through several different lenses the development of the human being through inherited tendencies ingrained habits and environmental factors in life all receive due consideration later on in the text are a series of mental tests whereby pyle observes differences between males and females in terms of vocabulary and memory like several texts of its era this book stands out for its philosophical roots the discussion of psychological topics finely balances theoretical conjecture with practical tests and observations a superb text for those wishing to gain an understanding of mental functioning and human behaviour as well as an important milestone in the history of psychology the science of human nature continues to hold steady popularity to this day particularly among avid enthusiasts and students of psychology together with licensed and practicing professionals in the field

winner of the international business book award 2019 from the million copy bestselling author of the 48 laws of power robert greene is a master guide for millions of readers distilling ancient wisdom and philosophy into essential texts for seekers of

power understanding and mastery now he turns to the most important subject of all understanding people's drives and motivations even when they are unconscious of them themselves we are social animals our very lives depend on our relationships with people knowing why people do what they do is the most important tool we can possess without which our other talents can only take us so far drawing from the ideas and examples of pericles queen elizabeth i martin luther king jr and many others greene teaches us how to detach ourselves from our own emotions and master self control how to develop the empathy that leads to insight how to look behind people's masks and how to resist conformity to develop your singular sense of purpose whether at work in relationships or in shaping the world around you the laws of human nature offers brilliant tactics for success self improvement and self defence

this book explores the idea of human nature and the many understandings of it put forward by such diverse figures as aristotle rousseau marx freud darwin and e o wilson each chapter looks at a different theory and offers a concise explanation assessing the theory's plausibility without forcing it into a mould some chapters deal with the ideas of only one thinker while others such as the chapters on liberalism and feminism present a variety of different positions a clear distinction is made between theories of human nature and the political theories which so often follow from them for the new edition loptson has addressed the new developments in the rapidly expanding genetic and paleontological record as well as expanded the discussion of the christian theory of human nature by incorporating the ideas of the marx scholar and social theorist g a cohen the new edition has also been substantively revised and updated throughout

the notion of human nature is often called upon to carry the burden of a great number of arguments i all men we are told are motivated to action by the same basic desires needs instincts drives unity is given to a great variety of human behaviour if we see them as emanating from a single source ii given that human nature is what it is then social institutions and political organisations ought to be such and such human nature is the one unchangeable constant in a varying social system iii given that human nature describes certain basic and common needs then the good man is a man that has had these needs satisfied

just as a good plant is one that has had its needs satisfied good and bad are determined in terms of the basic human requirements theories of human nature therefore have powerful consequences it is important that one should be clear about what exactly is involved in this notion of a human nature statements that assert something about the nature or essence of man are by no means restricted to philosophers we have on the one hand the traditional and largely speculative claims of plato hobbes and rousseau but we have also the more scientific claims of psychologists freud maslow fromm and anthropologists lorenz ardrey morris psychologists and anthropologists claim new insights for why we do the things that we do they give explanations of human behaviour in terms of general and basic laws these generalisations turn out to be descriptions of human nature i argue that the scientific enterprise of formulating such general laws for the purpose of explaining human action is radically misconceived how does the human nature theorist arrive at his theory that is how is one supposed to make this discovery about a human essence what do we look for where do we look for it and how do we go about discovering it these are important questions that need to be asked of both the psychologist and the anthropologist they will lead us to both a clearer understanding of the kind of argument involved in their claims and will also bring to the forefront the underlying assumptions in their position human nature theorists employ a number of terms that seem to be essential to the theories terms like desire need drive and instinct function as primary elements because any formulation of a general law that purports to have explanatory force with regards to human behaviour must employ terms that are generally and ordinarily employed to explain particular actions explanation of human behaviour by reference to the general law achieves a certain plausibility by giving the impression of doing what we ordinarily do when we explain another's behaviour while at the same time claiming scientific status for the explanation concentrating therefore in particular on the psychologist's use of need viz maslow all men need love and the anthropologist's use of instinct viz ardrey and morris all men are born with the instinct for aggression i attempt to show that these scientific explanations of human behaviour are incoherent for they depend on the ordinary use of these terms to achieve plausibility while at the same time they depend on a scientific use to legitimise their conclusions

our views on human nature are fundamental to the whole development indeed the whole future of human society originally

published in 1974 professor thorpe believed that this was one of the most important and significant topics to which a biologist can address himself and in this book he attempts a synthetic view of the nature of man and animal based on the five disciplines of physiology ethology genetics psychology and philosophy in a masterly survey of the natural order he shows the animal world as part of yet distinct from the inanimate world he then treats aspects of the animal world which approach the human world in behaviour and capabilities examining simple organisms communications in vertebrates and invertebrates innate behaviour versus acquired behaviour and animal perception in the second part of the book he deals with those aspects of human nature for which there is no analogy and which constitute man's uniqueness his consciousness of his past his awareness of his future and his desire to understand the meaning of his existence the primary facts which demonstrate the importance of this book arise from the ever growing power of man over his environment and his apparent inability to foresee and cope with the dangers of uncontrolled population growth on the one hand and the wildly irrational waste and degradation of the natural resources of the world on the other professor thorpe believes that an immense responsibility lies with literate men of good will particularly scientists to convince man that he is the spearhead and custodian of a stupendous evolutionary process animal nature and human nature integrates scientific fact with sound theological thought in an attempt to fulfil in a manner previously impossible pascal's injunction that it is dangerous to show man too clearly how much he resembles the beast without at the same time showing him his greatness it is also dangerous to allow him too clear a vision of his greatness without his baseness it is even more dangerous to leave him in ignorance of both but it is very profitable to show him both

unpopular in its day david hume's sprawling three volume a treatise of human nature 1739 40 has withstood the test of time and had enormous impact on subsequent philosophical thought hume's comprehensive effort to form an observationally grounded study of human nature employs john locke's empiric principles to construct a theory of knowledge from which to evaluate metaphysical ideas a key to modern studies of eighteenth century western philosophy the treatise considers numerous classic philosophical issues including causation existence freedom and necessity and morality unabridged republication of the edition originally published by oxford at the clarendon press london 1888

the science of human nature explores human behavior by examining instincts emotions habits and social influences it aims to explain why people think feel and act the way they do using ideas from psychology and observation to better understand personality and human relationships main theme study of human mind behavior and emotions through reason and observation human nature humans are naturally social and moral beings mind and soul thoughts desires and feelings are explained through natural laws rather than supernatural forces morality moral sense arises from human empathy and social instincts education and society proper education and social environment can improve human behavior purpose to understand humans scientifically to create better societies

questions for further consideration and recommended further reading which follow each relevant chapter encourage readers to think further and to craft their own perspectives

over six previous editions twelve theories of human nature has been a remarkably popular introduction to some of the most influential developments in western and eastern thought now titled thirteen theories of human nature this text continues to be an ideal introduction to human nature and intellectual history this unique volume will engage and motivate students to consider how we can understand and improve both ourselves and human society
