nietzsche distinguished between two forces in art apollonian which represents order and reason and dionysian which represents chaos and energy an ideal work of art combines these two characteristics in a believable relatable balance economists ward argues have operated for too long under the assumption that their work reflects scientific apollonian principals when these simply do not or cannot apply constants in

economics stand in for variables mathematical equations represent the simplified ideal rather than the complex reality and the core scientific principal of replication is all but ignored in dionysian economics ward encourages economists to reintegrate the standard rigor of the scientific method into their work while embracing the fact that their prime indicators come from notoriously chaotic and changeable human beings rather than emphasizing its shortfalls compared to an extremely apollonian science such as physics economics can aspire to the standards of a science that accounts for considerable dionysian variation such as biology the book proposes that economists get closer to their dynamic objects of study that they avoid the temptation to wish away dynamic complexity by using simplifying assumptions and that they recognize the desire to take risks as fundamentally human

to write everything about nothing or to write nothing about everything this is the problem anonym circa 1996 97 the first idea to write a book on mathematical economics more or less ordered in a historical sequence occurred to me in 1995 when i was asked by istituto delta enciclopedia italiana to write the entry storia dell economia 1 2 matematica for the collective work storia dei xx secolo i thought that it would be interesting to elaborate on the text presented to the editors to turn it into a book aiming at giving a panorama of what in my opinion are the main 20th century contributions to mathematical economics of course only a narrow set of the contributions made by economic theorists could be included both for space limitations and necessity because 3 of the limited competence of any single author for instance i have paid very limited attention to what is now called macroeconomics and also to game theory which actually has grown so much as to acquire scientific independence as a living branch of applied mathematics for the same reason i have also left completely untouched such fields as mathematical finance public economics theory of taxation etc i have always based my presentation on published material only assuming that what is contained in working papers still waits to be confirmed possibly in the first years of the 21th century
