we study a variation of the eaton kortum model a competitive constant returns to scale multicountry ricardian model of trade we establish existence and uniqueness of an equilibrium with balanced trade where each country imposes an import tariff we analyze the determinants of the cross country distribution of trade volumes such as size tariffs and distance and compare a calibrated version of the model with data for the largest 60 economies we use the calibrated model to estimate the gains of a world wide trade elimination of tariffs using the theory to explain the magnitude of the gains as well as the differential effect arising from cross country differences in pre liberalization of tariffs levels and country size

we consider the design and implementation of international trade agreements when i negotiations are undertaken and commitments made in the presence of uncertainty about future political pressures ii governments possess private information about political pressures at the time that the agreement is actually implemented and iii negotiated commitments can be implemented only if they are self enforcing we thus consider the design of self enforcing trade agreements among governments that acquire private information over time in this context we provide equilibrium interpretations of gatt wto negotiations regarding upper bounds on applied tariffs and gatt wto escape clauses we find that governments achieve greater welfare when they negotiate the optimal upper bound on tariffs rather than precise tariff levels furthermore when governments negotiate the optimal upper bound on tariffs the observed applied tariffs often fall strictly below the bound our analysis also provides a novel interpretation of a feature of the wto safeguard agreement under which escape clause actions cannot be re imposed in the same industry for a time period equal to the duration of the most recent escape clause action we find that a dynamic usage constraint of this kind can raise the expected welfare of negotiating governments national bureau of economic research web site
