enduring questions in gerontology provides a comprehensive perspective on the abiding issues in gerontology both current and future gerontologists will find this book useful in examining emerging dilemmas and creating a context for further progress in the field of aging the most creative thinkers contributing to the gerontological literature reflect on their disciplines consider how key questions have emerged review how they have changed in the decades since gerontology entered the fray and speculate what may lie ahead the resulting collection of essays offers a comprehensive perspective on the enduring questions in gerontology and how they have shaped

our understanding of differences in the experience of old age key contributors to this volume include George I. Maddox, Christine I. Fry, Steven Austad, Kenneth Brummel-Smith, Manfred Diehl, Martha Holstein, W. Andrew Achenbaum, James E. Birren. As an emerging or seasoned scholar you will find insights into the ways in which each disciplinary focus grapples with societal transitions, identifies emerging issues and lays out strategies and salient perspectives for what should come next.

Psychology is of interest to academics from many fields as well as to the thousands of academic and clinical psychologists and general public who can't help but be interested in learning more about why humans think and behave as they do. This award-winning twelve-volume reference covers every aspect of the ever-fascinating discipline of psychology and represents the most current knowledge in the field. This ten-year revision now covers discoveries based in neuroscience, clinical psychology's new interest in evidence-based practice and mindfulness, and new findings in social, developmental, and forensic psychology.

In *Perception: First Form of Mind*, Tyler Burge develops an understanding of the most primitive type of mental representation, perception, focusing on the functions and capacities of perceptual states. Burge accounts for their representational content and structure and develops a formal semantics for them. The discussion explains the role of iconic format in the structure. It also situates the accounts of content, structure, and semantics within scientific explanations of perceptual state formation, emphasizing formation of perceptual categorization. In the book's second half, Burge discusses what a perceptual system is, exploration of relations between perception and other primitive capacities: conation, attention, memory, anticipation, affect, learning, and imagining. Helps distinguish perceiving with its associated capacities from thinking with its associated capacities. Drawing mainly on vision science, not introspection. *Perception: First Form of Mind* is a rigorous agenda-setting work in philosophy of perception and philosophy of science.

This special issue ponders a detailed and contemporary analysis of the theoretical underpinnings of short-term and working memory. Articles focus on short-term memory for phonological, semantic, and spatial material; on executive function; and on short-term forgetting. The empirical perspectives include the neuroimaging of short-term memory, short-term memory development, and the neuropsychology and neurobiology of memory. In addition to laboratory-based experimental studies, together these articles identify significant current models and approaches to short-term and working memory, providing a broad set of perspectives which illustrate the wide impact of working memory on the understanding of human cognition.

Includes established theories and cutting-edge developments. Presents the work of an international group of experts. Presents the nature, origin, implications, and future course of major unresolved issues in the area.

Integrating developmental principles into a lifespan perspective, this chronologically organized
