the objective of this book is to acquaint the reader with the ways in which evaluation results can be made more credible through careful choice of a design prescribing when and from whom the data will be gathered the book helps the reader choose a design put it into operation and analyze and report the data that has been gathered

the golden standard evaluation reference text now in its second edition evaluation theory models and applications is the vital text on evaluation models perfect for classroom use as a textbook and as a professional evaluation reference the book begins with an overview of the evaluation field and program evaluation standards and proceeds to cover the most widely used evaluation approaches with new evaluation designs and the inclusion of the latest literature from the field this

second edition is an essential update for professionals and students who want to stay current understanding and choosing evaluation approaches is critical to many professions and evaluation theory models and applications second edition is the benchmark evaluation guide authors daniel l stufflebeam and chris l s coryn widely considered experts in the evaluation field introduce and describe 23 program evaluation approaches including new to this edition transformative evaluation participatory evaluation consumer feedback and meta analysis evaluation theory models and applications second edition facilitates the process of planning conducting and assessing program evaluations the highlighted evaluation approaches include experimental and quasi experimental design evaluations daniel l stufflebeam s cipp model michael scriven s consumer oriented evaluation michael patton s utilization focused evaluation robert stake s responsive stakeholder centered evaluation case study evaluation key readings listed at the end of each chapter direct readers to the most important references for each topic learning objectives review questions student exercises and instructor support materials complete the collection of tools choosing from evaluation approaches can be an overwhelming process but evaluation theory models and applications second edition updates the core evaluation concepts with the latest research making this complex field accessible in just one book

the book s chapters provide background on how and why the cipp context input process product model was developed a detailed presentation of the model an explanation of the key role of an evaluation oriented leader who can decide what and when to evaluate detailed presentations on evaluation design budgeting and contracting procedures and tools for collecting analyzing and reporting evaluation information and procedures for conducting standards based meta evaluations evaluations of evaluations these topics are interspersed with illustrative evaluation cases in such areas as education housing and military personnel evaluation

the concepts of cause and effect are critical to the field of program evaluation experimentally designed evaluations those that randomize to treatment and control groups offer a convincing means for establishing a causal connection between a program and its effects experimental evaluation design for program improvement considers a range of impact evaluation questions particularly those questions that focus on the impact of specific aspects of a program laura r peck shows how a variety of experimental evaluation design options can provide answers to these questions and she suggests opportunities for experiments to be applied in more varied settings and focused on program improvement efforts

this book is aimed at the wide audience of future systems developers which includes people working or studying such areas as business science engineering the social sciences education and the liberal arts the text provides the basic skills and understanding needed by anyone involved with systems development offering a comprehensive look at systems development from the initial stage of determining user requirements to the final evaluation of installed systems the broad scope of the book should help students and readers see the big picture of these projects making analysis and design techniques understandable within the context of the entire systems development process students should have some knowledge of computer systems beginning students will be best served by a two semester class while more advanced students should be able to cover the material in one

program evaluation embedding evaluation into program design and development provides an in depth examination of the foundations

methods and relevant issues in the field of evaluation with an emphasis on an embedded approach where evaluation is an explicit part of a program that leads to the refinement of the program students will learn how to conduct effective evaluations that foster continual improvement and enable data based decision making this text provides students with both the theoretical understanding and the practical tools to conduct effective evaluations while being rigorous enough for experienced evaluators looking to expand their approach to evaluation

the objectives of this project were to collect review and summarize current state highway department pavement procedures and develop recommendations for revisions to the aasho interim guides for the design of both rigid and flexible pavements

this book from sage's evaluation in practice series considers variants of experimental evaluation designs including those that are not commonly used but could be with much greater frequency it also includes instructions for how to set up such experiments within program processes to learn about the effects of improvement efforts
