math circles provide a setting in which mathematicians work with secondary school students who are interested in mathematics this form of outreach which has existed for decades in russia bulgaria and other countries is now rapidly spreading across the united states as well the first part of this book offers helpful advice on all aspects of math circle operations culled from conversations with over a dozen directors of successful math circles topics include creative means for getting the word out to students sound principles for selecting effective speakers guidelines for securing financial support and tips for designing an exciting math circle session the purpose of this discussion is to enable math circle coordinators to establish a thriving group in which students can experience the delight of mathematical investigation the second part of the book outlines ten independent math circle sessions covering a variety of topics and difficulty levels each chapter contains detailed presentation notes along with a useful collection of problems and solutions this book will be an indispensable resource for any individual involved with a math circle or anyone who would like to see one begin in his or her community sam vandervelde teaches at st lawrence university he launched the stanford math circle and also writes and coordinates the mandelbrot competition a math contest for high schools in the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life msri and the ams are publishing books in the mathematical circles library series as a service to young people their parents and teachers and the mathematics profession titles in this series are co published with the mathematical sciences research institute msri

moscow has a rich tradition of successful math circles to the extent that many other circles are modeled on them this book presents materials used during the course of one year in a math circle organized by mathematics faculty at moscow state university and also used at the mathematics magnet school known as moscow school number 57 each problem set has a similar structure it combines review material with a new topic offering problems in a range of difficulty levels this time tested pattern has proved its effectiveness in engaging all students and helping them master new material while building on earlier knowledge the introduction describes in detail how the math circles at moscow state university are run dorichenko describes how the early sessions differ from later sessions how to choose problems and what sorts of difficulties may arise when running a circle the book also includes a selection of problems used in the competition known as the mathematical maze a mathematical story based on actual lessons with students and an addendum on the san jose mathematical circle which is run in the russian style in the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life msri and the ams are publishing books in the mathematical circles library series as a service to young people their parents and teachers and the mathematics profession

this book is based on selected topics that the authors taught in math circles for elementary school students at the university of california berkeley stanford university dominican university marin county ca and the university of oregon eugene it is intended for people who are already running a math circle or who are thinking about organizing one it can be used by parents to help their motivated math loving kids or by elementary school teachers we also hope that bright fourth or fifth graders will be able to read this book on their own the main features of this book are the logical sequence of the problems the description of class reactions and the hints given to kids when they get stuck this book tries to keep the balance between two goals inspire readers to invent their own original approaches while being detailed enough to work as a fallback in case the teacher needs to prepare a lesson on short notice it introduces

kids to combinatorics fibonacci numbers pascal s triangle and the notion of area among other things the authors chose topics with deep mathematical context these topics are just as engaging and entertaining to children as typical recreational math problems but they can be developed deeper and to more advanced levels in the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life msri and the ams are publishing books in the mathematical circles library series as a service to young people their parents and teachers and the mathematics profession

this book is a captivating account of a professional mathematician s experiences conducting a math circle for preschoolers in his apartment in moscow in the 1980s as anyone who has taught or raised young children knows mathematical education for little kids is a real mystery what are they capable of what should they learn first how hard should they work should they even work at all should we push them or just let them be there are no correct answers to these questions and the author deals with them in classic math circle style he doesn t ask and then answer a question but shows us a problem be it mathematical or pedagogical and describes to us what happened his book is a narrative about what he did what he tried what worked what failed but most important what the kids experienced this book does not purport to show you how to create precocious high achievers it is just one person s story about things he tried with a half dozen young children mathematicians psychologists educators parents and everybody interested in the intellectual development in young children will find this book to be an invaluable inspiring resource in the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life msri and the ams are publishing books in the mathematical circles library series as a service to young people their parents and teachers and the mathematics profession titles in this series are co published with the mathematical sciences research institute msri

the main part of this book describes the first semester of the existence of a successful and now highly popular program for elementary school students at the berkeley math circle the topics discussed in the book introduce the participants to the basics of many important areas of modern mathematics including logic symmetry probability theory knot theory cryptography fractals and number theory each chapter in the first part of this book consists of two parts it starts with generously illustrated sets of problems and hands on activities this part is addressed to young readers who can try to solve problems on their own or to discuss them with adults the second part of each chapter is addressed to teachers and parents it includes comments on the topics of the lesson relates those topics to discussions in other chapters and describes the actual reaction of math circle participants to the proposed activities the supplementary problems that were discussed at workshops of math circle at kansas state university are given in the second part of the book the book is richly illustrated which makes it attractive to its young audience in the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life msri and the ams are publishing books in the mathematical circles library series as a service to young people their parents and teachers and the mathematics profession titles in this series are co published with the mathematical sciences research institute msri

many mathematicians have been drawn to mathematics through their experience with math circles the berkeley math circle bmc started in 1998 as one of the very first math circles in the u s over the last decade and a half 100 instructors university professors business tycoons high school teachers and more have shared their passion for mathematics by delivering over 800 bmc sessions on the uc berkeley campus every week during the school year this second volume of the book series is based on a dozen of these sessions encompassing a variety of enticing and stimulating mathematical topics some new and some continuing from volume i from dismantling rubik s cube and randomly putting it back together to solving it with the power of group theory from raising knot eating machines and letting alexander the

great cut the gordian knot to breaking through knot theory via the jones polynomial from entering a seemingly hopeless infinite raffle to becoming friendly with multiplicative functions in the land of dirichlet m□bius and euler from leading an army of jumping fleas in an old problem from the international mathematical olympiads to improving our own essay writing strategies from searching for optimal paths on a hot summer day to questioning whether archimedes was on his way to discovering trigonometry 2000 years ago do some of these scenarios sound bizarre having never before been associated with mathematics mathematicians love having fun while doing serious mathematics and that love is what this book intends to share with the reader whether at a beginner an intermediate or an advanced level anyone can find a place here to be provoked to think deeply and to be inspired to create in the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life msri and the ams are publishing books in the mathematical circles library series as a service to young people their parents and teachers and the mathematics profession titles in this series are co published with the mathematical sciences research institute msri

many mathematicians have been drawn to mathematics through their experience with math circles extracurricular programs exposing teenage students to advanced mathematical topics and a myriad of problem solving techniques and inspiring in them a lifelong love for mathematics founded in 1998 the berkeley math circle bmc is a pioneering model of a u s math circle aspiring to prepare our best young minds for their future roles as mathematics leaders over the last decade 50 instructors from university professors to high school teachers to business tycoons have shared their passion for mathematics by delivering more than 320 bmc sessions full of mathematical challenges and wonders based on a dozen of these sessions this book encompasses a wide variety of enticing mathematical topics from inversion

in the plane to circle geometry from combinatorics to rubik s cube and abstract algebra from number theory to mass point theory from complex numbers to game theory via invariants and monovariants the treatments of these subjects encompass every significant method of proof and emphasize ways of thinking and reasoning via 100 problem solving techniques also featured are 300 problems ranging from beginner to intermediate level with occasional peaks of advanced problems and even some open questions the book presents possible paths to studying mathematics and inevitably falling in love with it via teaching two important skills thinking creatively while still obeying the rules and making connections between problems ideas and theories the book encourages you to apply the newly acquired knowledge to problems and guides you along the way but rarely gives you ready answers learning from our own mistakes often occurs through discussions of non proofs and common problem solving pitfalls the reader has to commit to mastering the new theories and techniques by getting your hands dirty with the problems going back and reviewing necessary problem solving techniques and theory and persistently moving forward in the book the mathematical world is huge you ll never know everything but you ll learn where to find things how to connect and use them the rewards will be substantial in the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life msri and the ams are publishing books in the mathematical circles library series as a service to young people their parents and teachers and the mathematics profession

mathematical circles with their question driven approach and emphasis on problem solving expose students to the type of mathematics that stimulates the development of logical thinking creativity analytical abilities and mathematical reasoning these skills while scarcely introduced at school are in high demand in the modern world this book a sequel to mathematical circle diaries year 1 teaches how to think and solve problems in mathematics the material distributed among twenty nine weekly lessons includes detailed lectures and discussions sets of problems with solutions and contests and games in

addition the book shares some of the know how of running a mathematical circle the book covers a broad range of problem solving strategies and proofing techniques as well as some more advanced topics that go beyond the limits of a school curriculum the topics include invariants proofs by contradiction the pigeonhole principle proofs by coloring double counting combinatorics binary numbers graph theory divisibility and remainders logic and many others when students take science and computing classes in high school and college they will be better prepared for both the foundations and advanced material the book contains everything that is needed to run a successful mathematical circle for a full year this book written by an author actively involved in teaching mathematical circles for fifteen years is intended for teachers math coaches parents and math enthusiasts who are interested in teaching math that promotes critical thinking motivated students can work through this book on their own in the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life msri and the ams are publishing books in the mathematical circles library series as a service to young people their parents and teachers and the mathematics profession

classical euclidean geometry with all its triangles circles and inscribed angles remains an excellent playground for high school mathematics students even if it looks outdated from the professional mathematician s viewpoint it provides an excellent choice of elegant and natural problems that can be used in a course based on problem solving the book contains more than 750 mostly easy but nontrivial problems in all areas of plane geometry and solutions for most of them as well as additional problems for self study some with hints each chapter also provides concise reminders of basic notions used in the chapter so the book is almost self contained although a good textbook and competent teacher are always recommended more than 450 figures illustrate the problems and their solutions the book can be used by motivated high school students as well as their teachers and parents after solving the problems in the book the student will have mastered the main notions and methods of plane geometry and hopefully will

have had fun in the process in the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life msri and the ams are publishing books in the mathematical circles library series as a service to young people their parents and teachers and the mathematics profession what a joy shen s geometry in problems is a gift to the school teaching world beautifully organized by content topic shen has collated a vast collection of fresh innovative and highly classroom relevant questions problems and challenges sure to enliven the minds and clever thinking of all those studying euclidean geometry for the first time this book is a spectacular resource for educators and students alike users will not only sharpen their mathematical understanding of specific topics but will also sharpen their problem solving wits and come to truly own the mathematics explored also math circle leaders can draw much inspiration for session ideas from the material presented in this book james tanton mathematician at large mathematical association of america we learn mathematics best by doing mathematics the author of this book recognizes this principle he invites the reader to participate in learning plane geometry through carefully chosen problems with brief explanations leading to much activity the problems in the book are sometimes deep and subtle almost everyone can do some of them and almost no one can do all the reader comes away with a view of geometry refreshed by experience mark saul director of competitions mathematical association of america

the moscow mathematical olympiad has been challenging high school students with stimulating original problems of different degrees of difficulty for over 75 years the problems are nonstandard solving them takes wit thinking outside the box and sometimes hours of contemplation some are within the reach of most mathematically competent high school students while others are difficult even for a mathematics professor many mathematically inclined students have found that tackling these problems or even just reading their solutions is a great way to develop mathematical insight in 2006 the moscow center for continuous mathematical education began publishing a collection of problems from the moscow

mathematical olympiads providing for each an answer and sometimes a hint as well as one or more detailed solutions this volume represents the years 2000 2005 the problems and the accompanying material are well suited for math circles they are also appropriate for problem solving classes and practice for regional and national mathematics competitions in the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life msri and the ams are publishing books in the mathematical circles library series as a service to young people their parents and teachers and the mathematics profession titles in this series are co published with the mathematical sciences research institute msri
