understanding the mechanisms responsible for developmental dyslexia dd is a key challenge for researchers a large literature mostly concerned with learning to read in opaque orthographies emphasizes phono logical interpretations of the disturbance other approaches focused on the visual perceptual aspects of orthographic coding recently this perspective was supported by imaging data showing that individuals with dd have hypo activation in occipito temporal areas a finding common to both transparent and opaque orthographies nevertheless it is difficult to infer causal relationships from activation data accommodating these findings within the cognitive architecture of reading processes is still an open issue this is a general problem which is present in much of the literature for example several studies investigating the perceptual and cognitive abilities that distinguish groups of children with and without dd failed to provide explicit links with the reading process thus several areas of investigation e g acoustic deficits or magnocellular deficiencies have been plagued by replication failures furthermore much research has neglected the possible contribution of comorbid symptoms by contrast it is now well established that developmental disorders present a large spectrum of homotopic and heterotopic co morbidities that make causal interpretations problematic this has led to the idea that the etiology of learning difficulties is multifactorial thus challenging the traditional models of dd recent genetic studies provide information on the multiple risk factors that contribute to the genesis of the disturbance another critical issue in dd is that much of the research has been conducted in english speaking individuals however english is a highly irregular orthography and doubts have been raised on the appropriateness of automatically extending interpretations based on english to other more regular orthographies by contrast important information can be gotten from systematic comparisons across languages thus the distinction between regular and irregular orthographies is another potentially fruitful area of investigation overall in spite of much research current interpretations seem unable to integrate all available findings some proposals focus on the cognitive description of the reading profile and explicitly ignore the distal causes of the disturbance others propose visual acoustic or phonological mechanisms but fail to link them to the pattern of reading impairment present in different children the present research topic brings together studies based on different methodological approaches i e behavioural studies examining cognitive and psycholinguistic factors eye movement investigations biological markers neuroimaging and genetic studies involving dyslexic groups with and without comorbid symptoms and in different orthographies transparent and opaque to identify the mechanisms underlying dd the rt does not focus on a single model or theory of dyslexia but rather brings together different approaches and ideas which we feel are fruitful for a deeper understanding developmental dyslexia

we study the effects of the threat of school vouchers and school stigma in florida on the performance of low performing schools using student level data from a subset of districts estimates of the change in school level high stakes test scores from the first year of the reform are consistent with the early results used by the state of florida to claim large scale improvements associated with the threat of voucher assignment however we also find that much of this estimated effect may be due to other factors while we estimate a small relative improvement in reading scores on the high stakes test for voucher threatened stigmatized schools we estimate a much smaller relative improvement on a lower stakes nationally norm referenced test further the relative gains in reading scores are explained largely by

changing student characteristics we find more evidence for a positive differential effect on math test scores on both the low and highstakes tests however the results from the lower stakes test appear primarily limited to students in the high stakes grade finally we find some evidence that the relative improvements following the introduction of the a plan by low performing schools were more due to the stigma of receiving the low grade rather than the threat of vouchers abstract
