undergraduate students of engineering science and mathematics must quickly master a variety of mathematical methods although many of these students do not have strong mathematics backgrounds in this well received book now in its second edition the authors use their extensive experience with diverse groups of students to provide an accessible introduction to mathematical techniques they start at the elementary level and proceed to cover the full range of topics typically encountered by beginning students bl analytic geometry vector algebra vector fields div and curl differentiation and integration bl complex numbers matrix operations and linear systems of equations bl differential equations and first order linear systems functions of more than one variable double integrals and line integrals bl laplace transforms fourier series and fourier transforms bl probability and statistics incorporating many suggestions from readers this new edition has expanded discussions of vectors and new chapters on fourier series and on probability and statistics the emphasis throughout is on understanding concepts through well chosen examples and the book includes over 500 fully worked problems as far as is possible chapter topics are self contained so that a student only needing to master certain techniques can omit others without trouble the generously illustrated text also includes simple numerical processes which lead to examples and projects for computation particularly with mathematica and contains a large number of exercises with answers to reinforce the material these features combine to make this book an ideal starting point for students entering the sciences

scientists and engineers are increasingly making use of simulation methods to solve problems which are insoluble by analytical techniques monte carlo methods which make use of probabilistic simulations are frequently used in areas such as numerical integration complex scheduling queueing networks and large dimensional simulations this collection of papers arises from a conference held at the university of nevada las vegas in 1994 the conference brought together researchers across a range of disciplines whose interests include the theory and application of these methods this volume provides a timely survey of this field and the new directions in which the field is moving
