this book offers new findings on the impact of galaxy mergers on galaxy evolution and related processes galaxies are astronomical objects composed of stars gas and dark matter the main pathway for galaxy evolution in the currently accepted model for structure growth is through interactions and mergers or the process in which multiple galaxies interact collide and end up as one larger galaxy galaxy interactions and mergers are also considered to drive various processes pertaining to galaxy evolution such as star formation active galactic nuclei agn activity and chemical evolution as such not only are merging galaxy systems important to understand galaxy structure growth in a cosmological context they are also unique laboratories to study evolutionary processes taking place in galaxies however despite their importance the relative role of galaxy mergers on galaxy evolution is still heavily contested one reason for this is difficulty in identifying merger galaxies in observational data many different methods have been adopted for merger galaxy identification but none of them are perfect moreover the use of differing selection methods can result in widely different samples which can alter statistical results as such a novel robust method for merger identification is required to deepen our understanding of galaxy mergers in this book we introduce new methods to identify galaxy mergers from observational data the first method combines the use of visual identification both of optical and kinematic images with spectroscopic pair identification the second is machine learning based using a training method called fine tuning an application of transfer learning a pre trained model on galaxy images is further fine tuned using a sample of synthetic galaxy images to make a classifier for merger identification using samples identified by our methods the author conducts three studies the impact of mergers on galaxy chemical evolution the effect of galaxy local environment on merging activity and the connection between mergers and agn activity this book is mainly intended for astrophysicists particularly those studying galaxies however is open for all to read
