matlab in bioscience and biotechnology presents an introductory matlab course oriented towards various collaborative areas of biotechnology and bioscience it concentrates on matlab fundamentals and gives examples of its application to a wide range of current bioengineering problems in computational biology molecular biology bio kinetics

biomedicine bioinformatics and biotechnology in the last decade matlab has been presented to students as the first computer program they learn consequently many non programmer students engineers and scientists have come to regard it as user friendly and highly convenient in solving their specific problems numerous books are available on programming in matlab for engineers in general irrespective of their specialization or for those specializing in some specific area but none have been designed especially for such a wide interdisciplinary and topical area as bioengineering thus in this book matlab is presented with examples and applications to various school level and advanced bioengineering problems from growing populations of microorganisms and population dynamics reaction kinetics and reagent concentrations predator prey models mass transfer and flow problems to sequence analysis and sequence statistics this is the first book intended as a manual introducing biologists and other biotechnology engineers to work with matlab it is suitable for beginners and inexperienced users however applications of matlab to advanced problems such as the monte carlo method curve fitting and reliable machine diagnostics make the book relevant to university teachers as well the book is different in that it assumes a modest mathematical background for the reader and introduces the mathematical or technical concepts with a somewhat traditional approach matlab is then used as a tool for subsequent computer solution
