before the introduction of automatic machines and automation industrial manufacturing of machines and their parts for the key industries were made though manually operated machines due to this manufacturers could not make complex profiles or shapes with high accuracy as a result the production rate tended to be slow production costs were very high rejection rates were high and manufacturers often could not complete tasks on time industry was boosted by the introduction of the semi automatic manufacturing machine known as the nc machine which was introduced in the 1950 s at the massachusetts institute of technology in the usa after these nc machine started to be used typical profiles and complex shapes could get produced more readily which in turn lead to an improved production rate with higher accuracy thereafter in the 1970 s an even larger revolutionary change was introduced to manufacturing namely the use of the cnc machine computer numerical control since then cnc has become the dominant production method in most manufacturing industries including automotive aviation defence oil and gas medical electronics industry and the optical industry basics of cnc programming describes how to design cnc programs and what cutting parameters are required to make a good manufacturing program the authors explain about cutting parameters in cnc machines such as cutting feed depth of cut rpm cutting speed etc and they also explain the g codes and m codes which are common to cnc

the skill set of cnc program writing is covered as well as how to cut material during different operations like straight turning step turning taper turning drilling chamfering radius profile profile turning etc in so doing the authors cover the level of cnc programming from basic to industrial format drawings and cnc programs to practice on are also included for the reader

this book is a comprehensive guide to cnc basic programming which has been written for the use of students of iti diploma b tech etc technical courses ats scheme cnc programmer cum operator dgt nimi course and machine operators machine setters and supervisors working in other types of industries nowadays the increasing use of cnc in industries has given rise to its need only those people who know about it and are capable of preparing part programs can guide the machine tools using which parts are prepared with the required size and accuracy keeping this in mind i have prepared this textbook in hindi to bring out the mystery of cnc programming it has been put in a logical order and written in a very simple language which everyone can understand very easily to create a program the step by step process has been explained in this book with useful examples which will greatly benefit the students associated with this field in this book i have used the method created by me to write the program in which i have described each g and m code in detail in this book coordinate systems have been explained in detail in simple language for this space has been left to practice all the coordinate systems this will help in understanding this chapter easily in this most of the machining centers functions of machines working method of the machine and the main parts of the machine control panel buttons related to the operator panel have been described in detail simple method of making programs has been explained with examples an attempt has been made to cover most of the machining processes in this different types of materials and detailed pictures have been included to help in understanding it my feeling is that anyone who wants to make their future in cnc programming will benefit from this book and they will emerge as a successful cnc programmer many readers who may need some other different kind of programmer will benefit from these references with additional information on the other hand those who do not need further information about cnc programming can ignore those few pages and only explore the topics covered in this book i sincerely hope that this book will help you transform from a better cnc operator to a programmer by understanding not only the how but also the why of many programming techniques
