psychology is as its name suggests intended as a layman's psychology textbook. Angell was a functionalist and thus this book forwards his belief that the mind was a highly adaptive entity that was altered based on an individual's environment. The text opens with a brief preface from the author before delving into the subject matter more wholly. Angell addresses all of the major topics one would expect in an introductory textbook including a brief history of psychology and its most prominent methods. Problems with the study of psychology, the nervous system, sense perception, memory, emotions, instincts, and much more. The book is divided into chapters that can be read individually but the information is best served by digesting the book as a whole. Angell was an accomplished psychologist and a prominent educator, and his writing in an introduction to psychology demonstrate both his knowledge of the subject matter and his pedagogical abilities. The author's writing is clear and his major theories are presented plainly as an introduction to the subject.
