this book is about a new and different way of approaching and studying the history of the built environment and the use of historical precedents in design however although what i am proposing is new for what is currently called architectural history both my approach and even my conclusions are not that new in other fields as i discovered when i attempted to find supporting evidence in fact of all the disciplines dealing with various aspects of the study of the past architectural history seems to have changed least in the ways i am advocating there is currently a revival of interest in the history of architecture and urban form a similar interest applies to theory vernacular design and culture environment relations after years of neglect the study of history and the

use of historical precedent are again becoming important however that interest has not led to new approaches to the subject nor have its bases been examined this i try to do in so doing i discuss a more rigorous and i would argue a more valid way of looking at historical data and hence of using such data in a theory of the built environment and as precedent in environmental design underlying this is my view of environment behavior studies cebs as an emerging theory rather than as data to help design based on current theory although this will be the subject of another book a summary statement of this position may be useful

environmental design an anthology features diverse readings that explore the interdependency of humans and the built environment readers discover how environments affect human behavior how humans impact environments and the myriad factors to consider when designing or constructing new buildings landscapes or urban spaces the readings emphasize the impact of decisions made by designers builders and occupants on the health of human and natural systems the text is divided into four units organized by scale beginning small with the human body and increasing in scope to include natural systems unit zero provides a brief introduction to human development and how it influences design in unit one students examine the relationship between the human body and the built environment with emphasis on sensory perception unit two features readings that introduce the cultural concept of dwelling and how designers and builders create according to the needs of individuals communities and corporations in the final unit students learn about the relationships between the body the community and nature including discussion of sustainability and regenerative design environmental design is an ideal supplementary resource for courses in environmental design and architecture

although a responsible and welcome critical literature in the social sciences has in recent years been measuring the human costs of urban renewal and environmental degradation telling the designer what to avoid does not necessarily enlighten him about what to do the designers too have been transforming their attitudes moving away from the rhetorical toward the socially aware and the scientific the two groups are readier to meet now than ever before and if they do so in the ways put forth in this book with man in mind then we will be better able to bring our environmental technologies into human service with man in mind is not however a handbook or manual of techniques ready made it is instead an argument for changing the terms of our discourse about man and environment so that we can do interdisciplinary research on questions that matter with the questioning of the ideas in this book collaboration may finally begin

sustainable design for the built environment marks the transition of sustainable design from a specialty service to the mainstream approach for creating a healthy and resilient built environment this groundbreaking and transformative approach introduces sustainable design in a clear concise easy to read format this book takes the reader deep into the foundations of sustainable design and creates a holistic and integrative approach addressing the social cultural ecological and aesthetic aspects in addition to the typical performance driven goals the first section of the book is themed around the origins principles and frameworks of sustainable design aimed at inspiring a deeper broader and more inclusive view of sustainability the second section examines strategies such as biophilia and biomimicry adaptation and resilience health and well being the third section examines the application of sustainability principles from the global urban district building and human scale illustrating how a systems

as the nature of the field of environment behavior relations is interdis ciplinary the collaboration of three persons of diverse professional backgrounds in writing this book is therefore not surprising this col laboration started in 1972 with the offering of a graduate seminar envi ronment behavior and design evaluation at the university of massa chusetts several research projects dealing with design evaluation which have been conducted at the university are also included as case studies in this book chapter iii the elemr study and the visitor center study two of the authors have worked as part of the instructional team in the seminar and all of the authors have participated in varying degrees in the elemr project the authors backgrounds in design psychology and landscape architecture suggest by example that professionals with diverse backgrounds but a common interest in environment behavior problems can indeed learn to communicate and to collaborate since design evaluation is a new field and very little specific litera ture on the subject exists to date we hope this book fills a current need
