this report highlights the results of contractual studies of transport accident data undertaken in a joint  
research program sponsored by the faa and nasa from these accident data studies it was concluded that the  
greatest potential for improved transport crashworthiness is in the reduction of fire related fatalities  
accident data pertaining to fuselage integrity main landing gear collapse fuel tank rupture wing breaks  
tearing of tank lower surfaces and engine pod scrubbing are discussed in those accidents where the energy  
absorbing protective capability of the fuselage structure is expended and the airplane experiences major  
structural damage trauma caused fatalities are also discussed the dynamic performance of current seat  
restraint systems are examined but it is concluded that the accident data does not adequately define the  
relationship between occupant response and the dynamic interaction with the seat floor and fuselage
