the newest communication technologies are profoundly changing the world's politics, economies, and cultures, but the specific implications of online game worlds remain mysterious. The virtual future employs theories and methods from social science to explore nine very different virtual futures: the Matrix, Online, Tabula Rasa, Anarchy Online, Entropia Universe, Star Trek Online, EVE Online, Star Wars Galaxies, World of Warcraft, Burning Crusade, and The Chronicles of Riddick. Each presents a different picture of how technology and society could evolve in coming centuries, but one theme runs through all of them: the attempt to escape the earth and seek new destinies among the stars. Four decades after the last trip to the moon, a new conception of spaceflight is emerging, rather than rockets shooting humans across vast physical distances to sterile rocks that lack the resources to sustain life. Perhaps robot space probes and orbiting telescopes will glean information about the universe that humans can then experience inside computer-generated environments much closer to home. All nine of these fantastically rich multiplayer masterpieces have shown myriads of people that really radical alternatives to contemporary society could exist, and has served as a laboratory for examining the consequences. Each is a prototype of new social forms, a utopian subculture, and a simulation of technologies that have yet to be invented. They draw upon several different traditions of science fiction and academic philosophy, and they were created in several nations. By comparing these nine role-playing fantasies, we can better consider what kind of world we want to inhabit in the real future.

In part 3 of the first trilogy, characterising locally finite groups satisfying the strong Sylow theorem for the prime p . About the strong Sylow theorem for the prime p in simple locally finite groups, the strong Sylow theorem for the prime p in projective special linear locally finite groups. We continue the program begun in 10 to optimise along the way. 1. Its beautiful theorem about the first type and of infinite families of finite simple groups. Step by step to further types by proving it for the second type A_n . We start with proving the beautiful conjecture 2 of 10 about the general linear groups over commutative locally finite fields, stating that their rank is bounded in terms of their p -uniqueness, and then break down this insight to the

special linear groups and the projective special linear psl groups over locally finite fields we close with suggestions for future research regarding the remaining rank unbounded types the classical groups and the way 2 regarding the locally finite and p soluble groups and regarding augustin louis cauchy s and Évariste galois contributions to sylow theory in finite groups which culminate in the announcement of a second trilogy
