this project was aimed at evaluating and developing design methods for laterally loaded drilled shafts socketed in rock five lateral load tests on rock socketed drilled shafts with full range of instrumentation were conducted in ohio detailed instrumentation included the use of vibrating wire strain gages inclinometers dial gages and load cells p y curves representing site specific lateral shaft rock interaction were deduced from strain data field testing included the use of a borehole pressuremeter dilatometer to obtain measurements that were correlated with rock mass strength and deformation parameters as well as with p y curves a comparison was made between the baseline p y curves deduced from strain data of lateral load tests the p y curves predicted by using reese s interim criterion and the p y curves from the pressuremeter tests in rock a new hyperbolic p y criterion for rock is proposed based on the field test data and extensive theoretical work validation of the proposed p y criterion of rock was carried out by comparing the predictions of shaft deflections and bending moments using the hyperbolic p y criterion against actual lateral load tests results based on the findings of this study a complete solution for the design of drilled shafts socketed in rock or intermediate geomaterials under lateral loads is provided

the provisions of these specifications are intended for the design evaluation and rehabilitation of both fixed and movable highway bridges mechanical electrical and special vehicular and pedestrian safety aspects of movable bridges however are not covered provisions are not included for bridges used solely for railway rail transit or public utilities for bridges not fully covered herein the provisions of these specifications may be applied as augmented with additional design criteria where required these specifications are not intended to supplant proper training or the exercise of judgment by the designer and state only the minimum requirements necessary to provide for public safety the owner or the designer may require the sophistication of design or the quality of materials and construction to be higher than the minimum requirements the concept of safety through redundancy and ductility and protection against scour and collision are emphasized the design provisions of these specifications employ the load and resistance factor design lrfd methodology the factors have been developed from the theory of reliability based upon current statistical knowledge of loads and structural performance methods of analysis other than those included in previous specifications and the modelling techniques inherent in them are included and their use is encouraged the commentary is not intended to provide a complete historical background concerning the development of these or previous specifications nor is it
