this book combines elementary theory from computer science with real world challenges in global geodetic observation based on examples from the geodetic observatory wettzell germany it starts with a step by step introduction to

developing stable and safe scientific software to run successful software projects the use of software toolboxes is another essential aspect that leads to the application of generative programming an example is a generative network middleware that simplifies communication one of the book's main focuses is on explaining a potential strategy involving autonomous production cells for space geodetic techniques the complete software design of a satellite laser ranging system is taken as an example such automated systems are then combined for global interaction using secure communication tunnels for remote access the network of radio telescopes is used as a reference combined observatories form coordinated multi agent systems and offer solutions for operational aspects of the global geodetic observing system ggos with regard to industry 4.0

what exactly did the split over the anglo irish treaty of 1921 actually mean we know it both established the independent irish state and that ireland would not be a fully sovereign republic and provided for the partition of northern ireland the treaty was ratified 64 votes to 57 by the sinn fein members of the revolutionary dail eireann splitting sinn fein irrevocably and leading to the irish civil war a rupture that still defines the irish political landscape a century on drawing together the work of a diverse range of scholars who each re examine this critical period in irish political history from a variety of perspectives the anglo irish treaty debates addresses this vexed historical and political question for a new generation of readers in the ongoing decade of commemorations to determine what caused the split and its consequences that are still felt today
