fibroblast growth factors presents research and results from the leading global research group on fgf providing up to date and comprehensive coverage of the field the book describes the history basic research and growth engineering technology involved with fgfs while also introducing detailed research methods it comprises eight chapters that detail successes and problems in relation to wound healing of engineered growth factors and considers injury repair and regeneration non mitogenic mutants structure modification pathology physiology pharmacology development fgf fgfr inhibitors bioengineering and new drug development it will serve as a key reference book for researchers working on fgfs focuses on the growth engineering aspects of fgf based drug development and its clinical applications presents useful information on the history of fgfs along with basic research and growth engineering technology provides detailed practical research methods and results obtained on fgfs considers the successes and problems in engineering technology offers up to date comprehensive coverage from the world s leading research group

recently significant progress has been achieved in the use of immunotherapy for hematological tumors providing new hope for patients with brain tumors nevertheless clinical practice has demonstrated that the use of single agent immunotherapy has not produced substantial improvements in the prognosis of patients with brain tumors an increasing number of researchers are attempting combination therapies including radiotherapy chemotherapy and tumor treating fields ttf treatment combined with immunotherapy to treat brain tumors although combination therapy represents a significant breakthrough in immunotherapy for brain tumors it is still in the exploratory phase therefore additional research is necessary to explore this field further meanwhile treatment response assessment is another vital issue that remains to be further addressed in the clinical practice of immunotherapy of brain tumors which can contribute to providing personalized therapies for patients in this research topic we would like to identify innovative therapeutic approaches for patients with brain tumors including novel immunotherapies neoadjuvant therapy car cells oncolytic virotherapy and others to improve patient prognosis additionally the potential molecular mechanism associated with tumour immunity is another critical issue requires to be explored in this topic the identified genes can be served as treatment targets in the future furthermore we also want to find some useful predictors and or built models to early forecast the treatment response of patients who received immunotherapies which can promote the precision medicine of brain tumors we welcome contributions from authors who are committing to improving

immunotherapies in patients with brain tumors whether this be novel immunotherapies neoadjuvant therapy or combination therapy with the aim of boosting the anti tumour immune response researches that are devoted to exploring the predictors of immunotherapy response are also needed which includes immunological scoring scales image based methods and gene expression profiles etc contributions considered for this research topic include original articles clinical trials and review articles focusing on 1 immunotherapies for gliomas 2 immunotherapies for brain metastases 3 immunotherapies for other malignancies 4 targetable genes associated with oncoimmunology 5 predictors of immunotherapy response manuscripts consisting solely of bioinformatics or computational analysis of public genomic or transcriptomic databases which are not accompanied by robust and relevant validation clinical cohort or biological validation in vitro or in vivo are out of scope for this topic
