financial data are typically characterised by a time series and cross sectional dimension accordingly econometric modelling in finance requires appropriate attention to these two or occasionally more than two dimensions of the data panel data techniques are developed to do

exactly this this book provides an overview of commonly applied panel methods for financial applications including popular techniques such as fama macbeth estimation one way two way and interactive fixed effects clustered standard errors instrumental variables and difference in differences panel methods for finance a guide to panel data econometrics for financial applications by marno verbeek offers the reader focus on panel methods where the time dimension is relatively small a clear and intuitive exposition with a focus on implementation and practical relevance concise presentation with many references to financial applications and other sources focus on techniques that are relevant for and popular in empirical work in finance and accounting critical discussion of key assumptions robustness and other issues related to practical implementation

discovering structural equation modeling using stata revised edition is devoted to stata s sem command and all it can do learn about its capabilities in the context of confirmatory factor analysis path analysis structural equation modeling longitudinal models and multiple group analysis each model is presented along with the necessary stata code which is parsimonious powerful and can be modified to fit a wide variety of models the datasets used are downloadable offering a hands on approach to learning a particularly exciting feature of stata is the sem builder this graphical interface for structural equation modeling allows you to draw publication quality path diagrams and fit the models without writing any programming code when you fit a model with the sem builder stata automatically generates the complete code that you can save for future use use of this unique tool is extensively covered in an appendix and brief examples appear throughout the text
