in the half century since world war ii american academic culture has changed profoundly academic figures who have helped to produce many of these changes explore how four disciplines in the social sciences and humanities political science economics philosophy and literary studies have been transformed the book compares the different paths these disciplines have followed and the consequent alterations in their relations to the larger public

leading economists presenting fundamentally important issues in economic theory is the theme of the nancy schwartz lectures series held annually at the j l kellogg graduate school of management of northwestern university reporting on lectures delivered in the years 1983 through 1997 this collection of essays discusses economic behavior at the individual and group level and the implications to the performance of economic systems using non technical language the speakers present theoretical experimental and empirical analysis of decision making under uncertainty and under full and bounded rationality the influence of economic incentives and habits and the effects of learning and evolution on dynamic choice perfect competition economic development social insurance and social mobility and negotiation and economic survival are major economic subjects analyzed through our understanding of economic behavior

the author examines the interplay between evolutionary game theory and the equilibrium selection problem in noncooperative games evolutionary game theory is one of the most active and rapidly growing areas of research in economics unlike traditional game theory models which assume that all players are fully rational and have complete knowledge of details of the game evolutionary models assume that people choose their strategies through a trial and error learning process in which they gradually discover that some strategies work better than others in

games that are repeated many times low payoff strategies tend to be weeded out and an equilibrium may emerge larry samuelson has been one of the main contributors to the evolutionary game theory literature in evolutionary games and equilibrium selection he examines the interplay between evolutionary game theory and the equilibrium selection problem in noncooperative games after providing an overview of the basic issues of game theory and a presentation of the basic models the book addresses evolutionary stability the dynamics of sample paths the ultimatum game drift noise backward and forward induction and strict nash equilibria

developed over a ten year period at the stanford business school this textbook underscores the connections between microeconomics and business its full length integrated case studies reveal how economic models can yield answers to practical problems

over the past two decades academic economics has undergone a mild revolution in methodology the language concepts and techniques of noncooperative game theory have become central to the discipline this book provides the reader with some basic concepts from noncooperative theory and then goes on to explore the strengths weaknesses and future of the theory as a tool of economic modelling and analysis the central theses are that noncooperative game theory has been a remarkably popular tool in economics over the past decade because it allows analysts to capture essential features of dynamic competition and competition where some parties have proprietary information the theory is weakest in providing a sense of when it and equilibrium analysis in particular can be applied and what to do when equilibrium analysis is inappropriate many of these weaknesses can be addressed by the consideration of individuals who are boundedly rational and learn imperfectly from the past written in a non technical style and working by analogy the book first given as part of the clarendon lectures in economics is readily accessible to a broad audience and will be of interest to economists and students alike knowledge of game theory is not required as the concepts are developed as the book progresses

mainstream economics considers individual preferences to be fixed and unchanging although psychologists and other social scientists explore how tastes are formed influenced and evolve it is not considered proper in orthodox economics to do so arguing about tastes makes the case that economists should abandon the principle that preferences are fixed and instead incorporate into their work how context and experience shape individual tastes david m kreps argues that the discipline must account for dynamic personal tastes when it comes to understanding social exchange emphasizing human resource management and on the job behavior he develops formal models that illustrate the power of intrinsic motivation and show why applying extrinsic incentives can be counterproductive kreps weighs the advantages and disadvantages of the principle *de gustibus non est disputandum* there is no arguing about tastes he calls for a new era of economics in which preferences are taken into account and not for granted arguing about tastes concludes with responses by the distinguished economists alessandra casella and joseph e stiglitz and a final reply by kreps

contains research articles on the mathematics and applications of control theory and on those parts of optimization theory concerned with the dynamics of deterministic or stochastic systems in continuous or discrete time or otherwise dealing with differential equations dynamics infinite dimensional spaces or fundamental issues in variational analysis and geometry

three themes are brought together in this volume innovative activity managerial performance in the organization of innovations and markets for ownership and control in consideration of these themes several specific questions are raised
