this book provides a critical selective review of concepts from game theory and their applications in public policy and further suggests some modifications for some of the models chiefly in cooperative game theory to improve their applicability to economics and public policy

this book discusses the fundamental issues regarding the effect of real estate regulation on housing urban development and considerations of justice and efficiency bringing together the contributions of prominent scholars representing diverse methodologies and academic disciplines this book offers new perspectives on core topics

such as the effectiveness of land use regulation in terms of housing availability enhanced equality and sustainable development and different modes of regulation and their mutual influences the book's eleven chapters are divided into five parts which address different aspects of real estate regulation combining theoretical analysis with a close observation of diverse case studies from north america and europe to china the middle east and developing economies part i offers cutting edge analysis on how to measure model and understand the impact of zoning and other modes of real estate regulation from economic and normative theoretical viewpoints part ii complements part i by providing historical observations and empirical knowledge on the actual contribution of zoning and historical conservation regulation to cities shape part iii considers the outcomes of business and industrial land development policies part iv studies urban land development regulation and allows to compare between two relevant case studies one from germany and the other from poland finally part v concerns standardization in the real estate market by analyzing the justification and outcomes of such attempts particularly in the mortgages market providing an interface between theory and practice the book will appeal to a broad audience consisting of scholars policy makers practitioners and students interested in an interdisciplinary overlook on real estate regulation

agents are often better informed than the clients who hire them and may exploit this informational advantage real estate agents who know much more about the housing market than the typical homeowner are one example because real estate agents receive only a small share of the incremental profit when a house sells for a higher value there is an incentive for them to convince their clients to sell their houses too cheaply and too quickly we test these predictions by comparing home sales in which real estate agents are hired by others to sell a home to instances in which a real estate agent sells his or her own home in the former case the agent has distorted incentives in the latter case the agent wants to pursue the first best consistent with the theory we find homes owned by real estate agents sell for about 3.7 percent more than other houses and stay on the market about 9.5 days longer even after controlling for a wide range of housing characteristics situations in which the agent's informational advantage is larger lead to even greater distortions national bureau of economic research web site

institutional investors in global market provides you with a comprehensive overview about what institutional investors do how they do it and when and where they do it it is about the production of investment returns in the

global economy being a book about the production process you learn about key issues found in the academic literature on the theory of the firm in this case the focus is on the global financial services industry where the building blocks underpinning the study of industrial corporations are less relevant you gain an understanding of how and why the production of investment returns differs from that of manufactured goods you are provided with an analytical framework that situates financial institutions within the complex web of the intermediaries that dominate developed financial markets in summary you gain further insights into analysis of the organization and management of institutional investors as well as an analysis of the global financial services industry

many experiments have shown the human brain generally has very serious problems dealing with probability and chance a greater understanding of probability can help develop the intuition necessary to approach risk with the ability to make more informed and better decisions the first four chapters offer the standard content for an introductory probability course albeit presented in a much different way and order the chapters afterward include some discussion of different games different ideas that relate to the law of large numbers and many more mathematical topics not typically seen in such a book the use of games is meant to make the book and course feel like fun since many of the early games discussed are casino games the study of those games along with an understanding of the material in later chapters should remind you that gambling is a bad idea you should think of placing bets in a casino as paying for entertainment winning can obviously be a fun reward but should not ever be expected changes for the second edition new chapter on game theory new chapter on sports mathematics the chapter on blackjack which was chapter 4 in the first edition appears later in the book reorganization has been done to improve the flow of topics and learning new sections on arkham horror uno and scrabble have been added even more exercises were added the goal for this textbook is to complement the inquiry based learning movement in my mind concepts and ideas will stick with the reader more when they are motivated in an interesting way here we use questions about various games not just casino games to motivate the mathematics and i would say that the writing emphasizes a just in time mathematics approach topics are presented mathematically as questions about the games themselves are posed table of contents preface 1 mathematics and probability 2 roulette and craps expected value 3 counting poker hands 4 more dice counting and combinations and statistics 5 game theory poker bluffing and other games 6 probability stochastic matrices board game movement 7 sports mathematics probability meets athletics 8 blackjack previous methods revisited 9 a mix of other games 10 betting systems can

you beat the system 11 potpourri assorted adventures in probability appendices tables answers and selected solutions bibliography biography dr david g taylor is a professor of mathematics and an associate dean for academic affairs at roanoke college in southwest virginia he attended lebanon valley college for his b s in computer science and mathematics and went to the university of virginia for his ph d while his graduate school focus was on studying infinite dimensional lie algebras he started studying the mathematics of various games in order to have a more undergraduate friendly research agenda work done with two roanoke college students heather cook and jonathan marino appears in this book currently he owns over 100 different board games and enjoys using probability in his decision making while playing most of those games in his spare time he enjoys reading cooking coding playing his board games and spending time with his six year old dog lilly
