as human activities are increasingly domesticating the earth's ecosystems new selection pressures are acting to produce winners and losers amongst our wildlife with particular emphasis on plants briggs examines the implications of human influences on micro evolutionary processes in different groups of organisms including wild weedy invasive feral and endangered species using case studies from around the world he argues that darwinian evolution is ongoing he considers how far it is possible to conserve endangered species and threatened ecosystems through management and questions the extent to which damaged landscapes and their plant and animal communities can be precisely recreated or restored many of darwin's ideas are highlighted including his insights into natural selection speciation the vulnerability of rare organisms the impact of invasive species and the effects of climate change on organisms an important text for students and researchers of evolution conservation climate change and sustainable use of resources

cancer research is at a crossroads traditionally cancer has been thought of as a disease of gene mutation where the stepwise accumulation of cancer gene mutations is the key and the identification of common gene mutations has been considered to be essential for diagnosis and treatment despite extensive research efforts and accumulated knowledge on cancer genes and pathways the clinical benefits of this traditional approach have been limited recently cancer genome sequencing has revealed an extensive amount of genetic heterogeneity where the long expected common mutation drivers have been difficult if not impossible to identify these realities ultimately challenge the conceptual framework of current cancer biology this book introduces a new concept of genome theory of cancer evolution in an attempt to unify the field many important and representative but often confusing questions and paradoxes are critically analyzed by comparing gene and genome based theories the hidden flaws of many popular viewpoints are addressed this discussion is intended to initiate a much needed critical re evaluation of current cancer research
