Recent years have seen digital advertising grow to the point where it will soon overtake television as the No. 1 advertising medium in the online environment. Consumers interact and share their thoughts on brands and their experiences using them. These electronic word-of-mouth (eWOM) communications have become a very important part of the success of products in today's cluttered environment. It is especially important to study how the practice of eWOM advertising operates and how marketers can influence eWOM in social media and other online sites. This volume starts with a chapter on the current state of knowledge on eWOM and then turns its attention to current research articles on a variety of eWOM formats. These include the posting of selfies on social media, the influence of review types on consumer perception and purchase intention, the effects of preannouncement messages, and how user-generated content can be used to induce effectiveness of eWOM on social media. The relationship of eWOM to brand building is emphasized in several of the chapters. This book was originally published as a special issue of the *International Journal of Advertising*.

This book is about responses to language variety, their variability, shape, and content, as well as the variable cognitive and neural pathways underlying them. The chapters explore access to processing of and outcomes of that diversity and complexity. Many traditions are represented from social psychology, from classic experimental methods as well as more current discourse-based analyses. Anthropology is represented in indexicality, iconization, recursivity, erasure, enregisterment, and ideologies. The sociolinguistic focus on specific rather than global elements that trigger responses is highlighted. The individual chapters address a variety of questions concerning language, attitude, belief, and ideology. In some cases singly, in others with a more general focus, including attempts to relate one style of research to another. If we accept the fact that individuals have great variability in the underlying cognitive structures that inform responses, it follows that no single way of eliciting and studying them will do. This book provides a tour of the emerging tools that have been productive in such investigations.
