arnheim gestalt and art is the first book length discussion of the powerful thinking of the psychologist of art rudolf arnheim written as a complete overview of arnheim s thinking it covers fundamental issues of the importance of psychological discussion of the arts the status of gestalt psychology the various sense modalities and media and developmental issues by proceeding in a direction from general to specific and then proceeding through dynamic processes as they unfold in time creativity development etc the book discovers an unappreciated unity to arnheim s thinking not content to simply summarize arnheim s theory however arnheim art and gestalt goes on to enrich and occasionally question arnheim s findings with the contemporary results of gestalt theoretical research from around the world but especially in italy and germany the result is a workable overview of the psychology of art with

bridges built to contemporary research making arnheim s approach living and sustainable

vygotsky opened up an original field in the science of psychology based on the sociohistorical theory of the nature of man s consciousness this work written more than forty years ago and now translated into english for the first time approaches the study of art from a psychological basis however vygotsky s view is free of the old subjective empirical outlook his method while objective and analytical found its basis in the reasoning that to analyze the structure of artistic creation one must re create the total concept motivated vygotsky to evolve the means by which artistic accomplishments could be examined and the elements of their validity revealed the psychology of art discusses the literary genre in its classical forms the fable the epic the short story and shakespearean tragedy the heightened levels of perception and feeling that are created by great literature and drama are discussed by vygotsky with clarity and conviction many of the appraisals in this work resulted from vygotsky s reaction to the fallacious solutions proposed by the one sided traditional views of the literary critics of his time an entire chapter art as technique investigates and expresses his contradistinctive views of the formalistic view of the nature of art for vygotsky form did not and could not exist independently as a valid dimension form appeared only in relation to the medium or the material it incarnated vygotsky s presentation of his thesis in the psychology of art is a logical procession of his basic thoughts in the first chapter the

psychological problem of art he clarifies the major pitfall of criticism up to his day where he points out the fundamental error of experimental aesthetics consists in starting from the wrong end that of aesthetic pleasure and aesthetic appraisal all the while intentionally ignoring the fact that both pleasure and appraisal may be arbitrary secondary or even irrelevant features of aesthetic behavior from here he goes on to investigate the psychological premises of art in viewing a work of art as a combination of aesthetic symbols aimed at arousing emotions in people vygotsky proceeds to analyze these symbols and re create the basic impersonal components that make up the psychology of the work without specific references to author creator or reader subject examining only the elements of form and material that are combined in the work for example in his chapter on hamlet vygotsky examines the structure from subjective and objective viewpoints presents the problems of identification of the hero and discusses the play in its various levels of consciousness essentially a work of synthesis the psychology of art laid the foundations for a new science of art and as such is a major contribution to its study

there is no end of talk and of wondering about art and the arts this book examines a number of questions about the arts broadly defined to include all of the arts some of these questions come from philosophy examples include what makes something art can anything be art do we experience real emotions from the arts why do we seek out and even cherish sorrow and fear from art when we go out of our way to avoid these very emotions in real life how do we decide what is good art do aesthetic judgments have any objective truth value why do we devalue fakes even if we indeed even the experts can t tell them apart from originals does fiction enhance our empathy and understanding of others is art making therapeutic others are common sense questions that laypersons wonder about examples include does learning to play music raise a child s iq is modern art something my kid could do is talent a matter of nature or nurture this book examines puzzles about the arts wherever their provenance as long as there is empirical research using the methods of social science interviews experimentation data collection statistical analysis that can shed light on these questions the examined research reveals how ordinary people think about these questions and why they think the way they do an inquiry referred to as intuitive aesthetics the book shows how psychological research on the arts has shed light on and often offered surprising answers to such questions

excerpt from the origins of art a psychological and sociological inquiry there is one point however to which the reader s attention should be called in this preface when treating of the art impulse i have especially in the tenth chapter mentioned in the footnotes

some modern writers on aesthetic who although starting from different assumptions have arrived at a conception of art which in many points may be compared to the one advanced in this book this comparison however has not been carried out in the text considerations of space account for this omission but it has a further ground in the circumstances under which the present work has originated a part of it containing the examination of feeling and its expression and the chapter on animal display was published in Swedish as early as 1896<sup>1</sup> that is before the above mentioned authors had made their theories known this is not mentioned in order to raise any futile questions of priority but only as a justification of the way in which my conclusions have been presented about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at [forgottenbooks.com](http://forgottenbooks.com) this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

no single factor determined the growth of this book it may have been that as a novice researcher in behavioral psychology I experienced growing discontent with the direction of intellectual activity in which the accent was on methodology and measurement with a distinct atmosphere of dogmatism insecurity and defensiveness the anathema of tender mindedness was attached to any study of mental manifestations that avoided laboratory confirmation and statistical significance man in his uniqueness and unpredictable potentialities remained unexplored yet outside the systematic vivisection of variables and their measurement men of originality and genius were studying the mind in its complex yet natural interaction of aspirations values and creative capacities it was almost too easy for me to turn to them for the reorientation of my psychological interest and it was not difficult to find in Freud the most daring and penetrating representant of humanistic psychology furthermore it could have been the fact that Freud's thoughts on creative processes appeared to me at once starkly original and yet incomplete and fragmentary that led me to reconsider and expand on them Freud's fascination with culture and creativity although Frank and serious led him to a peculiar indecisiveness and overcautiousness which was radically different from the dramatic boldness of his therapeutic methods and the depth of his personality theories

this book is more than an introduction to the psychology of art appreciation it puts into perspective the research carried out within

the area and offers a new understanding of the relationship between art and viewer a number of studies within the psycho physical cognitive psychoanalytic and existential phenomenological schools of thought are presented in order to demonstrate how their views on the appreciation of visual art vary five different types of art appreciation ranging from a spontaneous preference for a work of art to a blissful experience of transcendence are identified and described

taking an interdisciplinary approach robert gray offers a thorough and well rounded clinical guide to exploring the depth of the unconscious through art in psychotherapy he emphasises the clinical relevance of art therapy and critically highlights ideas around evidence based practice and the link to cognitive behavioural therapy gray suggests specific ways of engaging with clients and their images such as uncovering life scripts changing neural pathways through creative mind ordering and addressing traumatic experiences through the jungian self box he shows how artists and psychotherapists can make a transformational difference by combining art as therapy and art in therapy with a scientific approach and a spiritual awareness he argues a clear framework that bridges the unmeasurable and spontaneous part of psychotherapy through art along with the work with the unconscious and the clarity of a scientific method can help facilitate long term change art therapy and psychology is hands on and rich with supportive study tools and numerous case studies with which the reader can relate this book is essential reading for art therapists in training and in practice psychologists and mental health professionals looking to establish or grow their expertise

psychological development is the scientific study of how and why human beings change over the course of their life originally concerned with infants and children the field has expanded to include adolescence adult development aging and the entire lifespan this field examines change across three major dimensions physical development cognitive development and socioemotional development within these three dimensions are a broad range of topics including motor skills executive functions moral understanding language acquisition social change personality emotional development self concept and identity formation in this book the area of discussion and analysis has been delimited to physiological and psychological areas so as to give a deeper treatment to the subject it is hoped that the book will find a wider acceptance among teachers and researchers the book is of interest to the researchers and students of psychology sociology child development family studies and professionals interested in related fields
