this book provides a thorough yet concise introduction to quantitative radiobiology and radiation physics particularly the practical and medical application beginning with a discussion of the basic science of radiobiology the book explains the fast processes that initiate damage in irradiated tissue and the kinetic patterns in which such damage is expressed at the cellular level the final section is presented in a highly practical handbook style and offers application based discussions in radiation oncology fractionated radiotherapy and protracted radiation among others the text is also supplemented by a site

this dissertation is composed of three essays essay 1 does school start too early for student learning considers the connection between school start time and student performance biological evidence indicates that adolescents internal clocks are designed to make them fall asleep and wake up at later times than adults this science has prompted widespread debate about delaying school start times in the u s a country which has some of the earliest start times worldwide the debate suffers however from a glaring absence of evidence the small number of prior studies has been too low powered statistically to test whether later start times improve achievement i fill the gap by studying achievement across a large nationally

representative set of high schools that have varying start times i identify the positive effect of later clock start times as well as the independent effect of greater daylight at school start time my primary empirical method is cross sectional regression with rich controls for potentially confounding variables the findings are confirmed by regression discontinuity analysis focused on schools close to time zone boundaries i quantify the net gain in welfare from having an additional hour of sunlight before school starts by comparing the substantial lifetime earnings benefits for students against the likely the societal costs essay 2 student success and teaching assistant effectiveness in large classes considers the impact teaching assistants tas have on student performance in universities tas play a crucial role by providing small group instruction in lecture courses with large enrollment the multiplicity of tas creates both positive opportunities and negative incentives on the one hand some tas may excel at tasks such as helping struggling students at which other tas fail if so all students may be able to learn better if they can match themselves to the ta that best suits their needs on the other hand the multiplicity of tas means that students in the same class often receive instruction that varies in quality even though they are ultimately graded on the same standard in this paper we use data from a large lecture course in which students are conditionally randomly assigned to tas in addition to administrative data on scores and grades we use survey data which we generated on students initial preparation their study habits and their interactions with tas we identify the existence of variation among tas in teaching effectiveness we also identify how tas vary in their effectiveness with certain subpopulations of students the least and best prepared students with different backgrounds and so on using our parameter estimates we simulate student achievement under scenarios such as random assignment to tas elimination retraining of the least effective tas and matching of tas to students based on initial information to show the potential gains in student welfare from more efficient matching essay 3 a study of student majors a historical perspective considers whether differing financial returns across degrees are a significant factor in a student s choice of a major during the late 1990s the u s experienced a technology boom that significantly increased the initial salary offers to engineering students and computer science students in particular these dramatic increases in returns provide an excellent opportunity to examine not only how students respond to salary levels but also to salary trends the existing literature has focused on the extent to which differing financial returns can affect a student s choice of undergraduate major this paper extends the analysis to test if trends in salary levels also affect the share of students selecting into various majors using a comprehensive dataset of all post secondary institutions i find that students select into majors that offer higher salaries and have greater wage growth using a flexible empirical model that allows students to respond to both changes in salary levels and growth i find that the results hold across majors and within engineering disciplines these results help to explain why for instance the percentage of students choosing to major in computer science grew more rapidly than could be explained by salary level alone

writing about ideas john maynard keynes noted that they are more powerful than is commonly understood indeed the world is ruled by little else one would expect therefore that political science a discipline that focuses specifically on the nature of power would have a healthy respect for the role of ideas however for a variety of reasons not least of which is the influence of rational choice theory which presumes that individuals are self maximizing rational actors this is not the case and the literature on the topic is fairly thin as the stellar cast of contributors to this volume show ideas are in fact powerful shapers of political and social life in ideas and politics in social science research daniel béland and robert henry cox have gathered leading scholars from a variety of subdisciplines in political science and sociology to provide a general overview of the theoretical empirical and methodological issues raised by social science research on ideas and politics throughout they hone in on three central questions what is the theoretical basis for studying ideas in politics what are the best methods what sort of empirical puzzles can be solved by examining ideas and related phenomena such as discourse policy paradigms and framing processes in sum this is a state of the art academic work on both the role of ideas in politics and the analytical utility that derives from studying them
