the accord for the protection of species at risk 1996 and the species at risk act 2003 are initiatives of the federal government that were established to provide protection and recovery for species at risk in canada fisheries and oceans canada dfo is the primary source of information and expertise concerning the assessment of extinction vulnerability of aquatic species the maritimes region of dfo is responsible for compiling biological information concerning status and potential extinction risk of marine fish species that support fisheries along the scotian shelf northern georges bank and in the bay of fundy given the breadth and importance of this task it is necessary that a method for rapid analysis be developed that allows for the assessment of potential extinction vulnerability of fish species and uses assessment criteria that are explicitly defined and relevant to marine species in canada the approach undertaken by the maritimes region was to develop a scoring matrix that 1 quantifies the dynamics of a species abundance and distribution and allows for rapid determination of whether or not that species may be at risk of extinction and 2 allows for easy comparison across taxa

through standardization of scoring the intention behind the matrix was to create a more intuitive ranking scheme than has been used in the past the potential extinction vulnerability of each species is graded out of 100 a high score represents a relatively high risk of extinction or extirpation from canadian waters species assigned high scores by this rapid process can then be subjected to further indepth evaluation the criteria and conditions for the matrix were derived from criteria used by cosewic and dfo s general status pilot project however a new set of conditions were developed for some criteria to address several of the deficiencies that existed in the general status approach and to accentuate factors that may of greater significance to extinction vulnerability than to the assessment of current abundance this exercise was intended to test the validity and utility of a matrix approach for rapid assessment of extinction vulnerability and ease of comparison among species the matrix is not intended to replace the formal assessment process but to identify species that may need higher priority for a formal cosewic assessment a prioritized candidate species list was created based on the results of the matrix analysis
