this ground breaking book focuses on the implications of the complexity vision such as that held by economists at the santa fe institute for the teaching of economics this complexity vision suggests that answers to questions such as how do markets develop and how do they evolve need to be approached head on complexity economics is beginning to do just that most of the work in complexity is highly formal and technical it seems far away from issues such as the teaching of economics this book is different

the focus of this book is not on the grand theories or technical aspects of complexity instead it is on the teaching of economics it asks the question how would the teaching of economics change if complexity is taken seriously an outstanding group of contributors including brian arthur buz brock and duncan foley provide interesting and provocative answers to that question in a non technical and highly accessible style it is a book that should be read by all those teaching economics as well as those who are interested in where the complexity revolution in science might be leading

in traditional theory of economic crisis and in all its manifestations there is no fundamental difference between economic disorder and economic crisis the two types of economic turmoil are both considered temporary states this book is a methodical study of deep seated causes of economic crises the aim of the book is to explain the key difference between economic disorder and economic crisis its key argument is that economic disorder is a permanent condition whereas economic crises are a series of transitory periods economic crises unlike economic disorders are acute and frenzied volatilities that are unpredictable and short lived humans cannot survive in a condition of perpetual economic crises but can only accommodate life under unremitting economic disorders the book also explores the root cause of economic crisis unlike the received wisdom in economics this book looks at the root cause of such hysterical economic turbulences as a result of an innate propensity of human fallibility the final section of this book looks at the ramifications of this alternative perspective on macroeconomic policy formation and implementation this book is a major contribution to the literature on economic disorder and crises and will be of great interest to readers of economic theory philosophy of economics and the history of economic thought

the authors introduce an element of centralization in a random matching model of money that allows for private liabilities to circulate as media of exchange some agents which the authors identify as banks are endowed with the technology to issue notes and to record keep reserves with a central clearinghouse which they call the treasury the liabilities are redeemed according to a stochastic process that depends on the endogenous trades the treasury removes the banking technology from banks that are not able to meet the redemptions in a given period this together with the market incompleteness gives rise to a reserve management problem for the issuing banks the authors demonstrate that

sufficiently patient banks will concentrate on improving their reserve position instead of pursuing additional issue the model provides a first attempt to reconcile limited note issue with optimizing behavior by banks during the national banking era

global interest in forest conservation biodiversity preservation and non timber values has risen while pressures on the forest as a source of income and employment have also increased these demands are often conflicting making forest planning allocation and policy formation very complex this volume explores theoretical and applied issues surrounding forest resource allocation the book is divided into three main subject areas 1 tropical forests environment economics and trade 2 non timber valuation theory and application and 3 ecosystem management the first of these focuses on tropical forests reflecting the fact that global environmental concerns surrounding these regions are often in conflict with local economic objectives the second section examines non timber values which are important in planning and policy decisions but are also very controversial the third group of chapters consider ecosystem management a concept that promotes the use of forest harvesting practices that mimic natural disturbance patterns overall the book will be of interest to readers in forestry and environmental economics
