introduces a radical concept that alters both biology and medicine forever it is the fact that
complex living organisms are assemblages of tiny self contained self regulating units our

organs our physiology our selves are built from these compartments hooke christens them cells the discovery of cells announced the birth of a new kind of medicine a hip fracture a cardiac arrest alzheimer s aids lung cancer all could be re conceived as the results of cells or a cellular ecosystem functioning abnormally and all could be treated by therapeutic manipulations of cells this revolution in cell biology is still in progress it represents one of the most significant advances in science and medicine bokinfo

this volume examines the origin of eukaryotic cells both phylogenetically and morphogenetically the evolutionary relationship between prokaryotic and eukaryotic organizations is emphasized the difference of inferences from ribosomal rna and protein phylogenetic trees suggests a new possibility of synthesizing an evolutionary origin of eukaryotic cells as integrating morphogenetic contributions

this book is a comprehensive multi authored work on the structure and function of the mammalian testis the approach emphasizes gene expression translation and production of specific gene products and the cellular and molecular regulation of these fundamental processes rather than provide a global survey of all aspects of male reproduction this book stresses specific mechanisms that underscore the structure and function of the testis it explains old and new concepts from a cellular and molecular perspective this novel approach allows the authors to forge links between cell and molecular biology and well established aspects of spermatogenesis and steroidogenesis the result is a well focused comprehensive and synthetic analysis of testicular biology

henry harris here provides an account of how scientists came to understand that the bodies of all living things are composed of microscopic units thta we now call cells harris turns to the primary literature the original texts scientific papers and correspondance of medical researchers involved in the formulation of the cell doctrine to reconstruct the events that enabled researchers to comprehend the nature and purpose of cells translating many of these documents into english for the first time harris uncovers a version of events quite different from that described in conventional science textbooks focusing on the scientific history of the genesis of the cell doctrine the author also considers contemporary social and political contexts and shows how these influenced what experiments were undertaken and how the results were represented
