over your retirement account the owner of a small business a manager running a billion dollar pension fund or a ceo in charge of a global corporation a large portion of triumph and defeat is closely linked with the broad swings in the economy the business cycle in other words is the mother of all known and recurring risk factors accordingly developing a process for assessing the likelihood of this threat is critical everyone needs a reliable timely warning system that s relatively uncomplicated and transparent drawing on economic theory and macro s historical record nowcasting the business cycle outlines a simple but effective model for identifying those times when a new recession has probably started this isn t forecasting which is a fool s errand when it comes to the economy instead the goal is recognizing when a majority of key indicators have already reached a tipping point that may sound like a trivial advantage but most people including many economists don t fully recognize when a recession has begun until the deterioration is obvious by that point the opportunity has probably passed for taking defensive measures in your investment portfolio your business or your career the real challenge is less about predicting and more about developing solid intuition for recognizing when the macro threat is exceptionally high even a small degree of progress here can provide a considerable boost to your strategic insight if we can learn the techniques for recognizing a cyclical downturn s presence relatively early soon after it s begun or just as it s starting we ll have an advantage that tends to elude most folks nowcasting the business cycle provides a roadmap for ensuring that you won t be caught by surprise when the next recession strikes that s a crucial advantage for one powerful reason there s always another recession coming
