since 1938 and 1941 nutrient intake recommendations have been issued to the public in Canada and the United States respectively currently defined as the dietary reference intakes (DRI). These values are a set of standards established by consensus committees under the National Academies of Sciences, Engineering, and Medicine and used for planning and assessing diets of apparently healthy individuals and groups. In 2015 a multidisciplinary working group sponsored by the Canadian and U.S. government Dietary Reference Intake (DRI) Steering Committees convened

to identify key scientific challenges encountered in the use of chronic disease endpoints to establish dri values their report options for basing dietary reference intakes dris on chronic disease report from a joint us canadian sponsored working group outlined and proposed ways to address conceptual and methodological challenges related to the work of future dri committees this report assesses the options presented in the previous report and determines guiding principles for including chronic disease endpoints for food substances that will be used by future national academies committees in establishing dris
