in this chapter we described issues in conducting intervention research with students with learning disabilities on the secondary level we main tained that interventions should be well grounded in theories of learning as well as characterizations of learning disabilities pressley scruggs mastropieri 1989 that they should first be conducted in a series of highly controlled laboratory like experiments to carefully assess the potential utility of the intervention and that if the intervention is suc cessful in highly controlled settings it should then be evaluated in class room applications we maintained that research designs should evolve as the research questions become more applied and

that the results of laboratory research should be used to support the findings of classroom applications finally we described several research designs that we have found useful in conducting classroom intervention research there is a great deal more to conducting intervention research of course than experimental or quasi experimental design intervention strategies likely to be effective must be identified relevant literature must be reviewed experimental materials must be developed and cooperative schools teachers parents and students must be located nevertheless inadequate research designs can invalidate the best and most successful efforts in all of these areas while effective and practical research designs can do much to document the best practices and advance our knowledge of effective interventions with students with learning disabilities references brigham f j scruggs t e mastropieri m a 1992

identification of learning disabilities research to practice is the remarkable product of a learning disabilities summit conference convened by the office of special education programs osep in august 2001 and the activities following that summit both the conference and this book were seen as important preludes to congressional reauthorization of the historic individuals with disabilities education act idea scheduled for 2002 and subsequent decision making surrounding implementation the osep conference brought together people with different perspectives on ld parents researchers practitioners and policymakers and resulted in this book which examines the research on nine key issues concerning the identification of children with learning disabilities coverage includes alternative responses to treatment classification approaches processing deficit models and approaches to decision making chapter structure each of the first nine chapters is organized around a lengthy issue oriented paper which presents the most current research on that topic these primary papers are then followed by four respondent papers that reflect a variety of viewpoints on the topic summarizing chapter a small group of researchers listed in the final chapter dedicated an enormous amount of time to summarizing the research and developing key consensus statements regarding the identification of children with learning disabilities their work is sure to have a tremendous impact on future discussions in this area expertise the following well known scholars have helped summarize the vast amount of research presented in this book as well as the consensus statements derived therefrom lynne cook don deshler doug fuchs jack m fletcher frank gresham dan hallahan joseph jenkins kenneth kavale barbara keogh margo mastopieri cecil mercer dan reschley rune simeonsson joe torgesen sharon vaughn and barbara wise

this book uses qualitative research methods to examine why students in an indian context are being identified as having learning disabilities on criteria that are largely drawn from the context of the global north it explores the push towards english language instruction as a possible factor that affects poor academic outcomes for students from low income backgrounds who may be first generation learners or english language learners the book contrasts the different outcomes and supports for academically struggling students across low income and middle income backgrounds with evidence to suggest that despite the inclusionary principles of education for all this label is creating a marginalized group of students

recently in the area of learning disabilities a subarea of special education an interesting development has become discernible this development centers on the increasing focus of learning disabilities professionals on theory building and empirical research and it is reflected in the spate of books currently being published with their clear emphasis on conceptual and methodological issues along with directions for future research these newly published books differ essentially from the bulk of learning disabilities textbooks they include s vaughn and c bos eds research in learning disabilities issues and future directions published in 1987 by college hill t e scruggs and b y l wong eds intervention

research in learning disabilities published in 1990 by springer verlag and I swanson ed learning disabilities theore tical and research issues published in 1991 by lawrence erlbaum asso ciates as reflected in these three books the discipline began with a service orientation and has evolved beyond that to come of age with aspirations of becoming a scientific discipline these books can be taken to voice the concerted efforts of learning disabilities professionals to promote theory building and empirical research undeniably these books provide valuable information on conceptual issues and research in learning disabilities nevertheless they appear to have one drawback namely they focus exclusively on learning disabilities research in north america

project report from the year 2009 in the subject didactics common didactics educational objectives methods vanier college course research methods language english abstract this pilot study consists of research about academic achievement and ld students our research project was initially to contribute to empirical data analysis on the question of how learning disabilities affect a college student s academic achievement and social life however due to certain practical issues there was a shift in our research question the purpose of our study is to determine the factors that hinder ld students in their academic achievement and social life and to propose solutions that help ld students academically and socially we hypothesized that learning disabilities could negatively affect academic achievement and social life in college regardless of gender or cultural background and that there exist factors that hinder them in their academic achievement and social life after interviewing a convenient sample of four different students who share similar learning disabilities we found out that three out of four ld students require extra time to study and understand they achieve well in school their heavy course workload and the teaching methods used hinder them in their learning process however the learning centre and other academic services help ld students to improve their academic performance some interviewees claimed that being more outgoing and open minded with their learning disabilities help them in their long term social relationships

although a number of books have appeared on learning disabili ties we feel that the present book has two distinct features which are not found in most others it is multidisciplinary and it com bines theory with practice a group of researchers from the disciplines of psychology in cluding medical psychology and information processing reading special education and physical education interacted with each other before and after their presentations in a conference november 1980 at the university of alberta edmonton canada and then wrote their chapters for this book we hope that their chapters were enriched by the discussions and arguments which happened in formal and informal settings during the authors stay in edmonton dr leong could not attend the conference but was asked to write the introductory chapter for the book the contributors to this volume have been involved with basic research as well as with clinical and educational research in learning disabilities some of them have a theoretical rather than a practical interest however a serious interest in a handicapping condition perhaps compels one to consider its amelioration no matter how pure is the researcher it is because of such a feeling that those who do basic research have sug gested procedures for applying their findings the result is a balanced product entailing theory and practice
