contrasts are statistical procedures for asking focused questions of data compared to diffuse or omnibus questions focused questions are characterized by greater conceptual clarity and greater statistical power when examining those focused questions if an effect truly exists we are more likely to discover it and to believe it to be real when asking focused questions rather than omnibus ones researchers teachers of research methods and graduate students will be familiar with the principles and procedures of contrast analysis but will also be introduced to a series of newly developed concepts measures and indices that permit a wider and more useful application of contrast analysis this volume takes on this new approach by introducing a family of correlational effect size estimates

systems research for behavioral science will be of interest to those in any discipline concerned with developments in science it is addressed principally to the student of human behavior as that study is approached from the social side previously the study of human behavior was the general area of science that had been slowest to respond to the exciting challenge of the modern systems outlook yet it is behavioral science that stands to gain the most from insights into the workings of more complex systems the editor presents not only a fair selection of systems research in behavioral science but also provides an extensive selection of important statements of general principles including several already considered classics hence this sourcebook may function in part as a principles text exposing the initiate to original pioneering statements as well as later work

inspired by them and alerting the sizeable number of underexposed scholars who are over familiar with the few terms such as feedback boundary input and output that there are much greater depths to plumb than meet the eye in semi popular accounts of cybernetics this volume is an overview of thinking that reflects a trend toward the system point of view some of the chapters are philosophical they discuss the significance of the trend as a development in the contemporary philosophy of science some are inevitably detailed and technical still other chapters discuss the relevance of concepts that are central in the system approach to particular fields of research the picture that emerges is far from that of a unified theory it is an open question whether much progress can be made by attempts to construct a unified theory of systems on some rigorous axiomatic base
