the techniques of visual photographic and photoelectric measurement of variable stars are accompanied by specific examples of the type of scientific results that can be and have been obtained

pulsating and eccentric binary stars play a fundamentally important role in deciphering the mass distribution within stars the present volume reviews the fundamental concepts of both radial and nonradial oscillations in the stars including the sun helio and astroseismological results are reviewed from the basics to the most recent

developments a new theory is presented which seems to explain the mechanism of the light and radial velocity variations of recently discovered ap stars this textbook covers almost all kinds of variable stars of widely different characteristics it will serve as a reference text for a very long time to come not only for specialists but also for undergraduate students of physics and astronomy

review of astronomical photometry for graduate students researchers and advanced amateurs in practical and observational astronomy

since the 1970s symposia or colloquia devoted to recent research on close binaries have been held around the world almost annually at meetings of the general assembly of the international astronomical union this topic has also been discussed in detail at presentations in various commission meetings and also as invited talks by leading astronomers in the field in recent years fundamental changes have taken place in the study of close binaries due to the improvements in observational techniques extension of observations from x ray to radio regions of the electromagnetic spectrum and advances in theoretical studies for more than a decade a group of astronomers at ege university observatory has been concentrating on active close binaries with particular emphasis on the behaviour of the light curves of chromospherically active systems thus we decided to organize an international meeting in western anatolia where this part of turkey had been the cradle for great developments in science during antiquity kuljadasi located only minutes away from ephesus one of the seven wonders of the world was selected to be the meeting site close binary systems constitute a very rich source of information about the physical properties of the component stars some systems are eclipsing variables where periodic recurrences of eclipses are observed as comparatively brief decreases in the total brightness of the binary system precise methods of photometric observations make it possible to obtain the light variations of these systems because of eclipses and other phenomena

this book is the proceedings of an international conference entitled close binaries in the 21st century new opportunities and challenges held in syros island greece june 27 30 2005 the papers collected in this volume detail the latest achievements in the field and reflect the state of the art of the dynamically evolving area of binary star research

astronomy and astrophysics abstracts which has appeared in semi annual volumes since 1969 is devoted to the recording summarizing and indexing of astronomical publications throughout the world it is prepared under the auspices of the international astronomical union according to a resolution adopted at the 14th general assembly in 1970 astronomy and astrophysics abstracts aims to present a comprehensive

documentation of literature in all fields of astronomy and astrophysics every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months this time interval is near to that achieved by monthly abstracting journals compared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user volume 13 contains literature published in 1975 and received before august 15 1975 some older literature which was received late and which is not recorded in earlier volumes is also included we acknowledge with thanks contributions to this volume by dr j bouska who surveyed journals and publications in the czech language and supplied us with abstracts in english and by the commonwealth scientific and industrial research organization c s i r o sydney for providing titles and abstracts of papers on radio astronomy we want to acknowledge valuable contributions to this volume by zentralstelle ftir atomkernenergie dokumentation leopoldshafen which supported our abstracting service by sending us retrospective literature searches

this textbook presents the established sciences of optical infrared and radio astronomy as distinct research areas focusing on the science targets and the constraints that they place on instrumentation in the different domains it aims to bridge the gap between specialized books and practical texts presenting the state of the art in different techniques for each type of astronomy the discussion proceeds from the orders of

magnitude for observable quantities that drive the building of instrumentation and the development of advanced techniques the specific telescopes and detectors are then presented together with the techniques used to measure fluxes and spectra finally the instruments and their limits are discussed to assist readers in choice of setup planning and execution of observations and data reduction the volume also includes worked examples and problem sets to improve student understanding tables and figures in chapters summarize the state of the art of instrumentation and techniques
