the 16 papers in this volume constitute a summary of recent research on the geological architecture and

environment of the Fraser River delta and the physical and chemical processes operating on it. The first two papers are overviews of the geological and seismic setting of the delta. The next two papers summarize present-day sedimentary environments on the delta. A third group of papers covers the geological architecture or lithostratigraphy of the delta and the biological structure or biofacies of the delta. The final group of papers is concerned with natural hazards and environmental issues including earthquakes, geotechnical stability, and seafloor sediment geochemistry.

Fire, flood, earthquake, vandalism, a terrorist attack, the issues of safety measures, emergency response, and disaster recovery have now become an important part of the planning strategies for most organizations. For the information organization such as a library, archives, or record center, this responsibility has taken on new dimensions with the proliferation of various forms of electronic media. The authors take the approach that disaster recovery planning must touch every department of an organization and that emergency response must be a carefully mapped strategy. This broad-based approach to integrated disaster planning explains each phase of disaster planning with chapters covering prevention, planning, protection, planning, preparedness, planning, response, planning, and recovery. The authors consider collections, records, facilities, and systems and include a chapter on post-disaster planning as well. The authors also cover federal and local assistance programs and list other sources for financial assistance. Although the main thrust of the book is the protection of documents, human safety in case of disaster is stressed explicitly and implicitly throughout. Indispensable for every information organization.
