challenging existing assumptions about how our towns and cities are structured and formed julian hart provides an engaging and thought provoking alternative theory of urban design this is not urban design in the sense of the practice of design rather it is a theory of the form of the town at all scales why towns and cities happen to be structured the way they are as a result of the social political legal and especially economic forces that create them the shape of the city at every scale from the internal configuration of dwellings all the way up to the superstructure of the whole city can be seen to arise from the interplay between three antagonistic socio economic tensions in going about our daily business and in championing particular political objectives we collectively fashion our cities in terms of their structure and form this leads to various new ways of understanding how and why our cities so happen to be configured the way they are the book makes a step change from any other comparable studies by understanding our towns and cities in terms of function in form this helps us to appreciate why every town is a recognisable town wherever it is different urban environments in different parts of the world past and present

can come to be seen according to their similarities instead of their differences furthermore by appreciating how the economic influences of everyday life structure our towns and cities we can in turn begin to understand better how the shape of towns and cities affects the quality of life of inhabitants and the cohesiveness of communities in covering all scales from inside the home to macrostructure of the city the book encapsulates urban design through to town planning and does not seek to distinguish between the various design disciplines

in the past twenty years the study of urban politics has shifted from a predominant concern with political culture and ethos to a preoccupation with political economy particularly that of urban development urban scholars have come to recognize that cities are shaped by forces beyond their boundaries from that focus have emerged the views that cities are clearly engaged in economic competition that market processes are shaped by national policy decisions sometimes intentionally and sometimes inadvertently and that the costs and benefits of economic growth are unevenly distributed but what else needs to be said about the policies and politics of urban development to supplement prevailing theories the politics of urban development argues that the role of local actors in making development decisions merits closer study whatever the structural constraints politics still matters collectively the essays provide ample evidence that local government officials and other community actors do not simply follow the imperatives that derive from the national political economy they are able to assert a significant degree of influence over the shared destiny of an urban population the impact of the collection is to heighten awareness of

local political practices and of how and why they make a difference
