is the paperless society really possible what is the future of paper in the digital age based on extensive statistics and six separate surveys paper to digital explores the evolution and changing characteristics of documents in the information age resultant implications are studied through the examination of emerging issues in the digital environment this timely book represents a useful and scholarly exploration of a major concern in our society

by analysing the irish development strategy this book questions its much portrayed success the republic of ireland has followed an export oriented development path relying on foreign direct investment inflows as the main development agent however this chosen path of development has led to growing industrial social and developmental polarisations despite the indisputable impressive overall growth figures growth is primarily driven by the investing multinationals and the inequality of earnings have been exacerbated thus questioning the irish growth model s success

both europe and the us have now dampened the shrillness of the invective hurled against each other over the last years but the underlying differences have not been resolved the two sides drift apart in their views on what internal politics should achieve as well as in their vision of the global order they would like to see established the economies of both

europe and the us are highly developed and densely interwoven their societies are post industrial many social and economic trends converge similar too are the challenges to maintain security against threats emanating from other parts of the world divergences thus do not originate from conflicting material interests they arise from different perceptions of the nature and of threats from the outside world from how the two societies wish to define themselves through their internal and external policies the search for a distinct european or american identity fuels this discord therefore appeals to common merely material interests will not obliterate it the contributions to this book come from altogether twelve authors each of them addressing the issues from the perspective of his or her own discipline the book aims to reach not just academia but also beyond to those that are involved in actual international decision making

tropical rain forests are the most complex varied and species rich terrestrial ecosystems on earth however these unique forests are more and more threatened by human activities

about half of the originally forested area has been deforested in the past decades and the pressure on today's remaining rain forests is still growing. The German Indonesian research project STORMA stability of rainforest margins in Indonesia analyses the causes, circumstances and consequences of rain forest conversion in its survey area in central Sulawesi. Indonesia vast areas of intact rain forest still exist but are currently facing increasing exploitation by the rural population especially the expansion of cultivation area for cocoa and maize represents a major threat for local rain forests. Remote sensing plays an important role in the examination of rain forest loss because it allows the regionalisation and quantification of spatial developments at different scales. In his book Christian Knieper gains information about land cover and land cover change in central Sulawesi on the basis of a Landsat 7 ETM time series. He applies a modern object oriented approach which allows the analysis of non-spectral features e.g. shape, spatial relations, thematic data and goes beyond the pure isolated statistical examination of each pixel's spectral values offered by traditional remote sensing techniques. The gathered results on land cover change provide essential information for socio-economic as well as ecological research activities within STORMA.
