associative digital network theory is intended for researchers at industrial laboratories teachers and students at technical universities in electrical engineering computer science and applied mathematics departments interested in new developments of modeling and designing digital networks dn state machines sequential and combinational logic in general as a combined math engineering discipline as background an undergraduate level of modern applied algebra birkhoff bartee modern applied algebra 1970 and hartmanis stearns algebraic structure of sequential machines 1970 will suffice essential concepts and their engineering interpretation are introduced in a practical fashion with examples the motivation in essence is the importance of the unifying associative algebra of function composition viz semigroup

theory for the practical characterisation of the three main functions in computers namely sequential logic state machines arithmetic and combinational boolean logic

general average is considered to be one of the most uniformly regulated topics of maritime law this study concludes that this perception is flawed the invariably applicable york antwerp rules do not provide a full regime whereas their applicability is generally contractual only as a result questions arise as to which law applies to general average obligations how the applicable national law is to be determined taking into consideration the impact of the european rome i and ii regulations and what is provided in the national regimes in addition questions arise as to what the influence is of contractual provisions set out in contracts for the carriage of goods by sea and general average security forms and how the various sources interact this study contains an in depth assessment of these questions

this book contains an extensive comparative law study of english american and dutch law concerning the construction of the hague visby rules australian and canadian law has been discussed where relevant the authors have attempted to present law at an academic level in a way which will be useful to the practising lawyer other matters discussed in this book are global limitation of liability the applicability of the hague visby rules in the netherlands and electronic bills of lading this book will be of interest to practitioners working in this very specialized field as well as to students of comparative law it will especially be of practical value to anyone dealing with cargo damage ship arrest or litigation in the netherlands provided by publisher

this proceedings contains papers presented at the 5th international conference on applied electrostatics held in shanghai china on november 2 5 2004 the icaes 2004 conference is of wide interest as is shown by the contributions received from 11 countries and districts throughout the world about 90 researchers attend the conference and more than 100 papers were submitted for presentation in the proceedings the paper sessions covered following topics fundamentals and physics applications precipitation pollution control spray separation material ozone etc hazards and problems biology technology electrets measuring technology electromagnetic compatibility and others these papers demonstrated recent research level and developing trends of the entire electrostatic field

written from an engineering standpoint with a focus on practical codes based on their performance and hardware complexit matrix code design for dependable systems emphasizes matrix codes and how they are manipulated unlike existing coding theory books this book does not burden the reader with unnecessary mathematics for polynomial codes
