this immensely readable and absorbing book the first of a three volume series on understanding the human mind concentrates on three major figures who have changed our image of human beings kaufmann drastically revises traditional conceptions of goethe kant and hegel showing how their ideas about the mind were shaped by their own distinctive mentalities kaufmann s version of psychohistory stays clear of gossip and is carefully documented he offers us a radically new understanding of two centuries of intellectual history but his primary focus is on self knowledge he is in a unique position to perform this task by virtue of being according to stephen spender the best translator of faust and in sidney hook s view unquestionably the most interesting and informative writer of hegel in english the foremost interpreter of kant lewis white beck has called this book on goethe kant and hegel fascinating a work which will stir up a good many people by telling them things they have never heard and providing an alternative to what is the accepted reading of that part of the history of philosophy the story of how personality affects philosophy has never been better told we are shown how goethe advanced the discovery of the mind more than anyone before him while kant was in many ways a disaster hegel like others between 1790 to 1990 tried to reconcile kant and goethe kaufmann shows this is impossible he paints a large picture but he is always highly specific and details the major contributions of goethe and hegel as well as the ways in which kant s immense influence proved catastrophic

walter kaufmann completed this the third and final volume of his landmark trilogy shortly before his death in 1980 the trilogy is the crowning achievement of a lifetime of study writing and

teaching this final volume contains kaufmann's tribute to sigmund freud the man he thought had done as much as anyone to discover and illuminate the human mind kaufmann's own analytical brilliance seems a fitting reflection of freud's and his acute commentary affords fitting company to freud's own thought kaufmann traces the intellectual tradition that culminated in freud's blending of analytic scientific thinking with humanistic insight to create a poetic science of the mind he argues that despite freud's great achievement and celebrity his work and person have often been misunderstood and unfairly maligned the victim of poor translations and hostile critics kaufmann dispels some of the myths that have surrounded freud and damaged his reputation he takes pains to show how undogmatic how open to discussion and how modest freud actually was kaufmann endeavors to defend freud against the attacks of his two most prominent apostate disciples alfred adler and carl gustav jung adler is revealed as having been jealous hostile and an ingrate a muddled thinker and unskilled writer and remarkably lacking in self understanding jung emerges in kaufmann's depiction as an unattractive petty and envious human being an anti semite an obscure and obscurantist thinker and like adler lacking insight into himself freud on the contrary is argued to have displayed great nobility and great insight into himself and his wayward disciples in the course of their famous fallings out

mcshane's broad interest is in finding a full effective cultural basis of a future humanity in the future core precepts in supramolecular method and nanochemistry 2019 he expressed what he considers the effective road forward the present book enlarges on that reach the effective road involves a clear operative distinction between the negative anthropocene in which we presently live shabbily and destructively and the positive anthropocene towards which we must work slowly and democratically against empires of idiocy by tuning into the chemistry of our desires this little book moves along with many twists and turns but it is also a straightforward help to begin to read properly the two main treatments by lonergan of the topic of interpretation section 3 of chapter 17 of insight and chapter 7 of method in theology

richard swinburne presents a powerful case for substance dualism and libertarian free will he argues that pure mental and physical events are distinct and defends an account of agent causation in which the soul can act independently of bodily causes we are responsible for our actions and the findings of neuroscience cannot prove otherwise

have you ever wondered why nordic countries are so prosperous peaceful good for business and happy they have a secret and it was invented in denmark folk bildung bildung is a german concept that combines moral and emotional development with education still it was a danish pastor and a teacher who democratized it and invented folk high schools and laid the foundation for some of the most prosperous countries in the world bildung keep growing tells the story of this danish invention and suggests a path towards global folk bildung and a wiser more meaningful happier future

during the first few years of life children acquire knowledge about the relationships between their own mental states their actions and the social world this information is then used to understand themselves and others humans are born into families where they are raised and learn to cooperate compete and communicate we are social creatures and over the course of development we learn about people relationships social systems and others minds in addition not only do we live socially we think socially as well however human adults are not the only creatures to live and think socially in recent years sophisticated experiments have provided new information about social cognition in human infants and nonhuman animals in this book we focus on the developmental and evolutionary origins of the social mind bringing together the currently segregated views on social cognition in the two eras ever since the term theory of mind was

coined by d premack nearly 30 years ago the concept has been the main topic of social cognition research both in developmental psychology and in primatology however few attempts have been made to integrate these two research domains just recently researchers from the two areas collaborated to publish a book on this topic but the volume was little more than a collection of independent papers this book overcomes that limitation by presenting new data and their implications from both developmental and evolutionary points of view
