a synthesis of quebec history from new france to the first referendum on sovereignty in 1980

this book is the most comprehensive up to date account of the popular numerical methods for solving boundary value problems in ordinary differential equations it aims at a thorough understanding of the field by giving an in depth analysis of the numerical methods by using decoupling principles numerous exercises and real world examples are used throughout to demonstrate the methods and the theory although first published in 1988 this republication remains the most comprehensive theoretical coverage of the subject matter not available elsewhere in one volume many problems arising in a wide variety of application areas give rise to mathematical models which form boundary value problems for ordinary differential equations these problems rarely have a closed form solution and computer simulation is typically used to obtain their approximate solution this book discusses methods to carry out such computer simulations in a robust efficient and reliable manner

a problem solving approach that helps students master new material and put their knowledge into practice the second edition of the acclaimed principles and modern applications of mass transfer operations continues to provide a thorough accessible text that gives students the support and the tools they need to quickly move from theory to application this latest edition has been thoroughly revised and updated with new discussions of such developing topics as membrane separations ion exchange multistage batch

distillation and chromatography and other adsorptive processes moreover the second edition now covers mass transfer phenomena in biological systems making the text appropriate for students in biochemical engineering as well as chemical engineering complementing the author's clear discussions are several features that help students quickly master new material and put their knowledge into practice including twenty five to thirty problems at the end of each chapter that enable students to use their newfound knowledge to solve problems examples and problems that help students become proficient working with mathcad figures and diagrams that illustrate and clarify complex concepts and processes references facilitating further in depth research into particular topics ten appendices filled with helpful data and reference materials ideal for a first course in mass transfer operations this text has proven to be invaluable to students in chemical and environmental engineering as well as researchers and university faculty

the present book builds upon an earlier work of j hale theory of functional differential equations published in 1977 we have tried to maintain the spirit of that book and have retained approximately one third of the material intact one major change was a complete new presentation of linear systems chapters 6 9 for retarded and neutral functional differential equations the theory of dissipative systems chapter 4 and global attractors was completely revamped as well as the invariant manifold theory chapter 10 near equilibrium points and periodic orbits a more complete theory of neutral equations is presented see chapters 1 2 3 9 and 10 chapter 12 is completely new and contains a guide to active topics of research in the sections on supplementary remarks we have included many references to recent literature but of course not nearly all because the subject is so extensive jack k hale sjoerd m verduyn lunel contents preface v introduction 1 1 linear differential difference equations 11 1 1 differential and difference equations 11 1 2 retarded differential difference equations 13 1 3 exponential estimates of $x(t)$ 15 1 4 the characteristic equation 17 1 5 the fundamental solution 18 1 6 the variation of constants formula 23 1 7 neutral differential difference equations 25 1 8 supplementary remarks 34 2 functional differential equations basic theory 38 2 1 definition of a retarded equation 38 2 2 existence uniqueness and continuous dependence 39 2 3 continuation of solutions 44
