engineers know that there is always more than one possible solution to a problem this interesting title explains how engineers test and compare different solutions to determine which solution is best

whatever their discipline engineers are routinely called upon to develop solutions to all kinds of problems to do so effectively they need a systematic and disciplined approach that considers a range of alternatives taking into account all relevant factors before selecting the best solution in problem solving for engineers david carmichael demonstrates just such an approach involving problem definition generation of alternative solutions and ultimately the analysis and selection of a preferred solution david carmichael introduces the fundamental concepts needed to think systematically and undertake methodical problem solving he argues that the most rational way to develop a framework for problem solving is by using a systems studies viewpoint he then outlines systems methodology modeling and the various configurations for analysis synthesis and investigation building on this the book

details a systematic process for problem solving and demonstrates how problem solving and decision making lie within a systems synthesis configuration carefully designed as a self learning resource the book contains exercises throughout that reinforce the material and encourage readers to think and apply the concepts it covers decision making in the presence of uncertainty and multiple criteria including that involving sustainability with its blend of economic social and environmental considerations it also characterizes and tackles the specific problem solving of management planning and design the book provides for the first time a rational framework for problem solving with an engineering orientation

this comprehensive resource covers all aspects of corrosion damage including detection monitoring prevention and control back cover
