the discipline of microbiology that deals with an amazingly diverse group of simple organisms such as viruses archaea bacteria algae fungi and protozoa is an exciting field of science starting as a purely descriptive field it has transformed into a truly experimental and interdisciplinary science inspiring a number of investigators to generate th a wealth of information on the entire gamut of microbiology the later part of 20 century has been a golden era with molecular information coming in to unravel interesting insights of the microbial world ever since they were brought to light through a pair of ground glasses by the dutchman antony van leeuwenhoek in later half of 17th century they have been studied most extensively throughout the next three centuries and are still revealing new facets of life and its functions the interest in them therefore continues even in the 21 st century though they are simple they provide a wealth of information on cell biology physiology biochemistry ecology and genetics and biotechnology they thus constitute a model system to study a whole variety of subjects all this provided the necessary impetus to write several valuable books on the subject of microbiology while teaching a course of microbial genetics for the last 35 years at delhi university we strongly felt the need for authentic compiled data that could give exhaustive background information on each of the member groups that constitute the microbial world

electronics has become the largest industry surpassing agriculture auto and heavy metal industries it has become the industry of choice for a country to prosper already having given rise to the phenomenal prosperity of japan korea singapore hong kong and ireland among others at the current growth rate total worldwide semiconductor sales will reach 300b by the year 2000 the key electronic technologies responsible for the growth of the industry include semiconductors the packaging of semiconductors for systems use in auto telecom computer consumer aerospace and medical industries displays magnetic and optical storage as well as software and system technologies

there has been a paradigm shift however in these technologies from mainframe and supercomputer applications at any cost to consumer applications at approximately one tenth the cost and size personal computers are a good example going from 500imip when products were first introduced in 1981 to a projected limip within 10 years thin light portable user friendly and very low cost are therefore the attributes of tomorrow s computing and communications systems electronic packaging is defined as interconnection powering cool ing and protecting semiconductor chips for reliable systems it is a key enabling technology achieving the requirements for reducing the size and cost at the system and product level
