this memoir tells the story of a life driven by alcohol addiction a journey which ultimately led the author to incarceration in a california prison for multiple convictions of drunk driving mr garth describes his misconceptions and fears before entering jail sarcastically nicknamed camp snoopy the sometimes harrowing experiences he had inside the unexpected friendships he made and the surprising things he learned that would change his life

this book is about the holy grail and god passing judgment on mankind and the father of this holy divine story being dragged to the gates of hell and leaving his begotten son with the sword of destiny this book also tells about angels and demons and saints and the movement of the reaper among the humans on earth at the end of this eternal dark world of destiny the divine son finds the redemption of his father with his sword of destiny at the end of the road

raised in the bronx eddie ferrara has his first encounter with organized crime as a teenager and it eventually leads to the death of one of his closest friends the events that follow rapidly lead him into the life eddie s story spans twenty years and takes us from a mob social club to a silicon valley startup from the brooklyn waterfront piers to a bordello in the bronx and from lincoln center to the neighborhood coffee shops and restaurants of new york city lately he has entertained notions of marriage and leaving the life only to realize that he is a victim of his own success eddie uses guile and intelligence to outclass his rivals but will he risk everything in an attempt to get out alive or is he destined to remain connected

house joint resolution no 23 2002 session of virginia s general assembly requested that the virginia transportation research council and the crash investigation team of virginia commonwealth university s transportation safety training center conduct a study of highway crashes involving trucks and other large vehicles stopped on the roadway or shoulder and struck in the rear the purpose of the study was to determine the spatial and perceptual factors physiological elements and ingredients that combine to cause or materially contribute to these crashes how and why these crashes occur and practical countermeasures to reduce the number and severity of these crashes to answer the question of how and why these crashes occur virginia crash data from 1997 through 2001 were analyzed in only a few crashes was a large truck stopped on the roadway or shoulder struck in the rear by a passenger vehicle rear end crashes in which the leading vehicle was stopped were more numerous but single vehicle roadway departure crashes into parked vehicles were more severe

environmental roadway and surface conditions had little influence the major contributing factor was driver inattention with regard to the psychological and perceptual factors contributing to these crashes it is likely that large trucks are more conspicuous than other stopped vehicles because of their size unique profile and requirements for reflectorized tape however large trucks stopped or parked continue to be struck in the rear by passenger vehicles the cause here is also driver inattention in several forms none of which can be directly attributed to any particular crash without a detailed crash investigation as to possible countermeasures two approaches stand out increasing driver attention and removing large trucks from the shoulder existing methods for increasing driver attention include using infrastructure warning systems and continuous shoulder rumble strips future improvements to driver attention are linked to technically advanced collision warning systems that will enter the marketplace before 2012 and provide an automatic warning to drivers of possible collisions removing large trucks from the shoulder is more of a problem and is tied to the larger issue of the supply and demand for public and private commercial vehicle parking short term improvements include amending and strictly enforcing existing parking regulations developing a pilot program to alert truck drivers of available parking facilities and investigating the use of virginia s weigh stations for large truck parking the long term approach includes conducting studies designed to document the extent of large truck parking on the ramps and shoulders of virginia s limited access highways assessing the adequacy of large truck parking statewide and prioritizing locations with the greatest need for public and private development of large truck parking facilities

the complete text of the 2015 california vehicle code it also includes a list of violations of the code

air quality has been an issue of growing importance to the transportation sector since the enactment of the clean air act amendments of 1990 and the transportation equity act for the 21st century in 1998 according to these acts states and local governments are required to attain and maintain national ambient air quality standards the mobile model is the mobile emission factor model used in estimating air pollutants generated by mobile sources in order to obtain accurate emission estimates mobile must be provided with sound input data that accurately reflect local conditions among many input factors vehicle miles traveled vmt fractions the percentage of vmt for each vehicle type by roadway functional class play a critical role in this study a new methodology for estimating locally specific vmt fractions as an input to the mobile model was developed based on this methodology vmt fractions were computed for the six non attainment areas in virginia frederick county fredericksburg hampton roads northern virginia richmond and roanoke these estimates were compared with

fractions estimated using existing methodologies the comparison revealed significant differences these differences coupled with the fact that the proposed methodology uses significantly more local data and requires fewer assumptions than existing methods illustrate the need for the virginia department of transportation vdot to reconsider its approach to applying the mobile model based on the results of this research effort it is recommended that vdot s environmental division use the proposed vmt fraction estimation methodology to generate input to the mobile model for mobile source emission estimates this methodology will benefit vdot by estimating mobile source emissions that better reflect local conditions the cost of implementing the recommendation is minimal estimation of vmt fractions is a current activity and the new methodology requires equivalent or less effort to the existing approach in addition required data for the proposed methodology can be obtained at no additional cost
