many books discuss the theology and doctrine of the medieval liturgy there is no dearth of information on the history of the liturgy the structure and development of individual services and there is much discussion of specific texts chants and services no book at least in english has struggled with the difficulties of finding texts chants or other material in the liturgical manuscripts themselves until the publication of medieval manuscripts for mass and office in 1982 encompassing a period of several centuries ca 1200 1500 this book provides solutions for such endeavours although by this period the basic order and content of liturgical books were more or less standardized there existed hundreds of different methods of dealing with the internal organisation and the actual writing of the texts and chants on the page generalization becomes problematic the use of any single source as a

typical example for more than local detail is impossible taking for granted the user's ability to read medieval scripts and some codicological knowledge. Hughes begins with the elementary material without which the user could not proceed: he describes the liturgical year, season, day, service, and the form of individual items such as responsory or lesson, and mentions the many variants in terminology that are to be found in the sources. The presentation of individual text and chant is discussed with an emphasis on the organisation of the individual column, line, and letter. Hughes examines the hitherto unexplored means by which a hierarchy of initial and capital letters and their colours are used by the scribes, and how this hierarchy can provide a means by which the modern researcher can navigate through the manuscripts. Also described in great detail are the structure and contents of breviaries, missals, and the corresponding books with music. This new edition updates the bibliography, and the new preface by Hughes presents his recent thoughts about terminology and methods of liturgical abbreviation.

Neuro robotics is one of the most multidisciplinary fields of the last decades, fusing information and knowledge from neuroscience, engineering, and computer science. This book focuses on the results from the strategic alliance between neuroscience and robotics that help the scientific community to better understand the brain as well as design robotic devices and algorithms for interfacing humans and robots. The first part of the book introduces the idea of neuro robotics by presenting state-of-the-art bio-inspired devices. The second part of the book focuses on human-machine interfaces for performance augmentation, which can be seen as augmentation of abilities of healthy subjects or assistance in case of the mobility-impaired. The third part of the book focuses on the inverse problem, i.e. how we can use robotic devices that physically interact with the human body in order to understand human motor control and to provide therapy to neurologically impaired people or people with disabilities.
