a dictionary of european anglicisms documents the spread of english in europe it provides the first exhaustive and up to date account of british and american english words that have been imported into the main languages of europe english which imported thousands of words from french and latin mainly after 1066 is now by far the world s biggest lexical exporter and the trade is growing as english continues to dominate various fields ranging from pop music to electronic communication several countries have monitored the inflow of anglicisms and some have tried to block it but language as lexicographers have always found and as this book demonstrates once more respects neither boundary nor law the dictionary not only shows which words have been

exported where but how the process of importation can change a word's form and function sometimes subtly at others remarkably as in the transformation of painkiller to bulgarian jack of all trades the book provides a systematic description of the lexical input of english into icelandic norwegian dutch german russian polish croatian bulgarian french spanish italian romanian finnish hungarian albanian and greek each entry has a brief definition of the loan word followed by information on its history and distribution variations in its spelling meaning and pronunciation its route of transmission if not direct from english its degree of acceptance and usage restrictions and its native equivalents and derivatives grids showing distribution patterns across europe accompany many of the entries the dictionary of european anglicisms is a scholarly tour de force french imported early nineteenth century and the result of a prodigious research effort across europe masterminded and directed by manfred gorlach it is a unique resource for comparative analysis and the study of linguistic variation and change it will fascinate linguists and word watchers of all persuasions

queuing theory methods are employed in managing traffic flows shipping facilities communication systems vertical transportation and others the study of such systems is outside the framework of the methods of classical queuing theory thus new methodologies such as systems with moving servers have evolved these systems are different and have complicated structures but they have one common ideology i.e. systems with moving servers the book is dedicated to constructing and investigating mathematical models of queueing systems with moving servers it is meant for researchers who are working in the application of mathematical methods in various fields traffic communication systems and others mathematicians in the field of queueing systems also researchers who are interested in the construction and investigation of mathematical models of queueing systems with moving servers the theoretical results are demonstrated on numerical
