xiv box for balanced automation research in this area is still young and emerging

in our opinion the development of hybrid balanced solutions to cope with a variety of automation levels and manual approaches is a much more challenging research problem than the search for a purely automatic solution various research activities described in this book illustrate some of these challenges through the development proposals assisting tools and initial results in certain chapters however the balancing aspects are not yet achieved in the research area but their inclusion in this book is intended to give a broader and more comprehensive perspective of the multiple areas involved one important aspect to be noticed is the extension and application of the concept of balanced automation to all areas of the manufacturing enterprise clearly the need for a balanced approach is not restricted to the shop floor components rather it applies to all other areas as illustrated by the wide spectrum of research contributions found in this book for instance the need for an appropriate integration of multiple systems and their perspectives is particularly important for the implantation of virtual enterprises although both the basys 95 and the basys 96 conferences have provided important contributions approaches and tools for the implantation of balanced automation systems there are a number of areas that require further research

this book illustrates the power of simulation modeling as a vehicle for analyzing and designing business processes it teaches how to apply process simulation and discusses the managerial implications of redesigning processes the extendsim software is available online and ancillaries are available for instructors
