the theory of optimal control systems has grown and flourished since the 1960 s

many texts written on varying levels of sophistication have been published on the subject yet even those purportedly designed for beginners in the field are often riddled with complex theorems and many treatments fail to include topics that are essential to a thorough grounding in the various aspects of and approaches to optimal control optimal control systems provides a comprehensive but accessible treatment of the subject with just the right degree of mathematical rigor to be complete but practical it provides a solid bridge between traditional optimization using the calculus of variations and what is called modern optimal control it also treats both continuous time and discrete time optimal control systems giving students a firm grasp on both methods among this book s most outstanding features is a summary table that accompanies each topic or problem and includes a statement of the problem with a step by step solution students will also gain valuable experience in using industry standard matlab and simulink software including the control system and symbolic math toolboxes diverse applications across fields from power engineering to medicine make a foundation in optimal control systems an essential part of an engineer s background this clear streamlined presentation is ideal for a graduate level course on control systems and as a quick reference for working engineers

this book provides a comprehensive study of multi stage and multi time scale design of feedback controllers for linear dynamic systems it examines different types of controllers as can be designed for different parts of the system subsystems using corresponding feedback gains obtained by performing calculations design only with subsystem reduced order matrices the advantages of the multi stage multi time scale design are presented and conditions for implementation of these controllers are established complete derivations and corresponding design techniques are presented for two stage two time scale three stage three time scale and four stage four time scale systems the techniques developed have potential applications to a large number of real physical systems the design techniques are demonstrated on examples of mathematical models of fuel cells especially the proton exchange membrane fuel cell

hyderabad the city of nawabs the charminar and biryani or a city plugged into the neural network of global technology hyderabad is both of those cities all at once and there is much more to it than meets the eye beyond biryani maps the journey from what was at best a proto colonial city under a quasi mughal princely state till the 1940s to the modern and vibrant metropolis that hyderabad is today in the

pages of this book we see the beginnings of that transformation the britishers who steered the city in the direction of developing a scientific temper and the nawabs who championed the cause and we discover the workings and patterns of the change from the chloroform commissions to ronald ross s discovery of malaria from the setting up of osmania university india s first vernacular university to the newly independent india pushing for industrial laboratories scientific research and strategic forays into nuclear fuel and missiles finally we discover how in the last thirty years hyderabad has taken giant leaps towards becoming a truly globalised city an alternative history of the city of hyderabad beyond biryani is a must read for anyone interested in how a city can catapult towards modernity while staying rooted in its cultural heritage
