contains selected invited papers presented at the 10th international symposium on surfactants in solution held in caracas venezuela the volume covers phase behaviour of monolayers contact angle hysteresis micellar relaxation micellar catalyzed reactions polymerization in microemulsions polymer surfactant complexation asphaltenes and more

this and its companion volumes 5 and 6 document the proceedings of the 5th international symposium on surfactants in solution held in bordeaux france july 9 13 1984 this symposium was the continuation of the series of symposia initiated in 1976 in albany new york under the title micellization solubilization and microemulsions the next two symposia were labelled solution chemistry of surfactants and solution behavior of surfactants theoretical and applied aspects held in knoxville tn in 1978 and potsdam n y in 1980 respectively in 1982 at the time of the 4th symposium in this series it became amply evident that there was a definite need to have more a generic title to describe these biennial events and after much deliberation it was decided that an appropriate title would be surfactants in solution as both the aggregation and adsorption aspects of surfactants were addressed so the 4th symposium was held in 1982 in lund sweden under this new rubric and it was decided to continue these symposia in the future under this appellation naturally the bordeaux symposium was dubbed as the 5th international symposium on surfactants in solution and our logo became sis which is very apropos and appealing it was in bordeaux that the decision was made to hold the 6th sis symposium in new delhi and it is scheduled for august 18 22 1986 in the capital of india

this book describes the microemulsion phenomenon in a systematic manner and not only provides an up to date introduction to this topic but aslo serves as the basis for further development in the area the progress of microemulsion research has taken place in well defined stages the introduction period was founded on schulman s original discovery and was as expected focused on the interfacial free energy because schulman obtained his microemulsions from a macroemulsion by the addition of a cosurfactant the present stage is characterized by an extensively enhanced knowledge about structure and dynamics in these systems this has led to the realization that the structure of the microemulsions is related both to solutions with critical behaviour and long range order structures the lyotropic liquid crystals these two aspects have been elucidated independently by the french groups and by the lund spectroscopy group
