this book focuses on continuing the long standing productive dialogue between physical science and the philosophy of science researchers and readers who want to keep up to date on front line scientific research in fluid mechanics and gravitational wave astrophysics will find timely and well informed analyses of this scientific research and its philosophical significance these exciting frontiers of research pose deep scientific problems and raise key questions in the philosophy of science related to scientific explanation and understanding theory change and assessment measurement interpretation realism and modeling the audience of the book includes philosophers of science philosophers of mathematics scientists with philosophical interests and students in philosophy history mathematics and science anyone who is interested in the methods and philosophical questions behind the recent exciting work in physics discussed here will profit from reading this book

it is now well established that all living systems emit a weak but permanent photon flux in the visible and ultraviolet range this biophoton emission is correlated with many if not all biological and physiological functions there are indications of a hitherto overlooked information channel within the living system biophotons may trigger chemical reactivity in cells growth control differentiation and intercellular communication i e biological rhythms the basic experimental and theoretical framework the technical problems and the wide field of applications in the food industry medicine pharmacology environmental science and basic sciences are presented in this book which also includes the rapidly growing literature this book is written by the most outstanding international scientists familiar with this topic who have been working in this field for many years

this series of volumes is a unique summary of the present state of understanding of solid surfaces the physical basis of chemisorption and heterogeneous catalysis is presented as a well developed science with contributions from an international panel of chemists physicists and metallurgists the books are destined to become a fundamental and indispensable reference source for all those studying the nature of solid surfaces and catalysis
