this is a book about an attempt to change the way math was taught in a particular classroom its title plays on our everyday usage of the terms theory and practice in education these terms are conventionally treated oppositionally we have theories about what we should do and we have what teachers actually do do in this way theory stands prior logically and chronologically to practice practice inevitably becoming theory's imperfect realization we seek in this volume however to develop a different stance with regard to the relationship between the two taking the details of instructional practice as our principle object of study we explore what role theories of learning might play in illuminating such practices the book is about actual practices by which teaching is done and how contemporary theories of learning might help us understand those practices it seeks to provide a foundation for future practice based inquiry in education by addressing the methodological question how do we go about studying

instructional practice in a principled way

the three concepts central to this volume practice learning and change have received very different treatments in the educational literature an oversight directly confronted here while learning and change have been extensively theorised their various contexts articulated and analysed practice is notably underrepresented where much of the literature on learning and change takes the notion of practice as an unexamined given its co location as a term with various classifiers as in legal practice and teaching practice render it curiously devoid of semantic force in this book practice is the super ordinate organising idea drawing on what has been termed the practice turn in contemporary theory the work develops a conceptual framework for researching learning in and on practice it challenges received notions of practice questioning the assumptions elisions conflation and silences on the subject in so doing it offers fresh insights into learning and change and how they relate to practice in tandem with this conceptual work the book details site ontological studies of practice and learning in diverse professional and workplace contexts examining the work of occupations as various as doctors chefs and orchestral musicians it demonstrates the value of theorising practice learning and change as well as exploring the connections between them amid our evolving social and institutional structures

once patronized primarily by the counterculture and the health food establishment the organic food industry today is a multi billion dollar business driven by ever growing consumer demand for safe food and greater public awareness of ecological issues assumed by many to be a recent phenomenon that industry owes much to agricultural innovations that go back to the dust bowl era this book explores the roots and branches of alternative agricultural ideas in twentieth century america showing how ecological thought has challenged and changed agricultural theory practice and policy from the 1930s to the present it introduces us to the people and institutions who forged alternatives to industrialized agriculture through a deep concern for the enduring fertility of the soil a passionate commitment to human health and a strong advocacy of economic justice for farmers randal beeman and james pritchard show that agricultural issues were central to the rise of the environmental movement in the united states as family farms failed during the depression a new kind of agriculture was championed based on the holistic approach taught by the emerging science of ecology ecology influenced the permanent agriculture movement that advocated such radical concepts as long term land use planning comprehensive soil conservation and organic farming then in the 1970s sustainable agriculture combined many of these ideas with new concerns about misguided technology and an over consumptive culture to preach a more sensible approach to farming in chronicling the overlooked history of alternative agriculture a green and permanent land records the significant contributions of individuals like rex tugwell hugh bennett louis bromfield edward faulkner russell and kate lord scott and helen nearing robert rodale wes jackson and groups like friends of the land and the practical farmers of iowa and by demonstrating how agriculture also remains central to the public interest especially in the face of climatic crises genetically altered crops and questionable uses of pesticides this book puts these issues in historical perspective and offers readers considerable food for thought
